MONTHLY PROGRESS REPORT

Name of CNSX Issuer: Dundee Sustainable Technologies Inc. (the "Issuer" or "DST").

Trading Symbol: DST

Number of Outstanding Listed Securities 297,090,816

Date: October 6, 2017

This Monthly Progress Report must be posted before the opening of trading on the fifth trading day of each month. This report is not intended to replace the Issuer's obligation to separately report material information forthwith upon the information becoming known to management or to post the forms required by Exchange Policies. If material information became known and was reported during the preceding month to which this report relates, this report should refer to the material information, the news release date and the posting date on the Exchange website.

This report is intended to keep investors and the market informed of the Issuer's ongoing business and management activities that occurred during the preceding month. Do not discuss goals or future plans unless they have crystallized to the point that they are "material information" as defined in the Policies. The discussion in this report must be factual, balanced and non-promotional.

General Instructions

- (a) Prepare this Monthly Progress Report using the format set out below. The sequence of questions must not be altered nor should questions be omitted or left unanswered. The answers to the items must be in narrative form. State when the answer to any item is negative or not applicable to the Issuer. The title to each item must precede the answer.
- (b) The term "Issuer" includes the Issuer and any of its subsidiaries.
- (c) Terms used and not defined in this form are defined or interpreted in Policy 1 – Interpretation and General Provisions.

Report on Business

1. Provide a general overview and discussion of the development of the Issuer's business and operations over the previous month. Where the Issuer was inactive disclose this fact.

The Corporation is engaged in the development of environment-friendly technologies for the treatment of complex materials in the mining industry. Through the development of patented, proprietary processes, DST extracts precious and base metals from ores, concentrates and tailings, while stabilizing contaminants such as arsenic, which could not otherwise be extracted or stabilized with conventional processes because of metallurgical issues or environmental considerations.

DST's most advanced proprietary process is the extraction of precious metals using a chlorination process which provides a cyanide-free alternative for the exploitation of gold deposits.

In addition to the chlorination process, DST operates a pilot plant designed to demonstrate its arsenic stabilization process for the sequestration of arsenic in a stable glass form. This process is becoming an attractive solution to segregate the arsenic and is therefore opening opportunities for materials considered to contain too much of this toxic material to be exploited or stabilized using conventional approaches.

In addition, DST has begun to exploit its world class laboratory, pilot scale and demonstration scale plants to provide technical services to clients in the graphite, aluminium, magnesium and lithium markets.

During the second quarter of 2017, the Corporation completed an audit with Sustainable Technology Development Canada and finalized the project with them and applied for the payment of the final holdback. Management's intention is to initiate an independent technical-economic study, designed with the objective of building DST's first commercial plant.

DST's arsenic vitrification technology was considered as the top-ranked dust stabilization and processing method by the State of Knowledge Review report (the "SOK Review"), prepared by Arcadis Canada Inc., and released on September 11, 2017 on behalf of the Giant Mine Oversight Board ("GMOB"). Arcadis's mandate was to provide an assessment of technologies, methods, or integrated combinations of technologies and methods that are potentially relevant to arsenic trioxide management at the Giant Mine site north of Yellowknife in the Northwest Territories, including over 50 technologies, previously evaluated by a technical advisor.

Furthermore, in September 2017, DST announced the results of a pilot scale metallurgical test program utilizing DST's arsenopyrite treatment approach, on a 5-tonne sample from Radisson's O'Brien gold project. DST successfully removed 92.2% of the arsenic content and demonstrated, at the pilot scale, that the refractory parcel of O'Brien gold material can undergo a pre-treatment to remove arsenic and create a mineral concentrate with levels of arsenic that are acceptable to the market and traditional gold recovery circuits.
