

## FORM 7

### MONTHLY PROGRESS REPORT

Name of CNSX Issuer: Dundee Sustainable Technologies Inc. (the "Issuer" or "DST").

Trading Symbol: DST

Number of Outstanding Listed Securities 311,976,530

Date: April 5, 2018

This Monthly Progress Report must be posted before the opening of trading on the fifth trading day of each month. This report is not intended to replace the Issuer's obligation to separately report material information forthwith upon the information becoming known to management or to post the forms required by Exchange Policies. If material information became known and was reported during the preceding month to which this report relates, this report should refer to the material information, the news release date and the posting date on the Exchange website.

This report is intended to keep investors and the market informed of the Issuer's ongoing business and management activities that occurred during the preceding month. Do not discuss goals or future plans unless they have crystallized to the point that they are "material information" as defined in the Policies. The discussion in this report must be factual, balanced and non-promotional.

#### **General Instructions**

- (a) Prepare this Monthly Progress Report using the format set out below. The sequence of questions must not be altered nor should questions be omitted or left unanswered. The answers to the items must be in narrative form. State when the answer to any item is negative or not applicable to the Issuer. The title to each item must precede the answer.
- (b) The term "Issuer" includes the Issuer and any of its subsidiaries.
- (c) Terms used and not defined in this form are defined or interpreted in Policy 1 – Interpretation and General Provisions.

#### **Report on Business**

1. Provide a general overview and discussion of the development of the Issuer's business and operations over the previous month. Where the Issuer was inactive disclose this fact.

**DST is engaged in the development and commercialization of environmentally friendly technologies for the treatment of complex materials from the mining industry. Through the development of patented, proprietary processes, DST extracts precious and base metals from ores, concentrates and tailings, while stabilizing contaminants such as arsenic, which could not otherwise be extracted or stabilized with conventional processes because of metallurgical issues or environmental considerations.**

DST offers a competitive alternative to the cyanidation process. The technology is at the forefront of the mining industry's innovative extraction processes and caters to the worldwide growing need for extractive technologies capable of processing refractory and arsenic bearing material. This alternative provides DST leverage to access quality material including material from metallurgical or environmentally constrained deposits.

DST's most advanced proprietary process is the extraction of precious metals using a chlorination process which provides a cyanide-free alternative for the exploitation of gold deposits. DST's Thetford facility is a state of the art crushing, grinding, mineral processing (hydrometallurgy and pyrometallurgy) facility which is available for test programs from the lab scale up to the thousands of tonnes scale, as shown by the completion of two gold chlorination demonstration campaigns.

DST's business plan is focused on controlling both of its technologies and leveraging them to become a major player in the industry. The Corporation has a unique opportunity to emerge as a major stakeholder in multiple mining projects. In the immediate term, DST is focused on advancing its discussions with major gold and copper producing companies on building alternative processing and stabilization processes. The Corporation is currently processing test material for a number of customers. Assuming successful results, the next step is to negotiate the business terms with those customers for commercializing its technologies.

Furthermore, in March 2018, DST initiated a metallurgical test program with First Cobalt Corp. ("First Cobalt") on high grade samples from the Canadian Cobalt Camp ("Project Material"). This test work is intended to develop an optimal process flowsheet for the recovery of silver and cobalt incorporating DST's arsenic removal and stabilization technologies.
