The growing pressure from communities and government authorities over the use of cyanide in various jurisdictions around the world is forcing developing gold projects to seek alternative processes that can extract the gold without the environmental liabilities associated with cyanide, while maintaining control over the deleterious elements such as arsenic, mercury and antimony.

DST offers metallurgical processes for the treatment of complex and refractory material from mining operations. DST's Technologies are applied for the extraction of precious metals and for the removal and stabilization of contaminants, such as arsenic from ores and concentrates. DST provides environmentally responsible, viable and efficient processes, capable of handling ores which may not be processed with conventional approaches due to metallurgical issues or environmental considerations.

The Company continues the commercialization of its Technologies and seeking to maximize the value of all of its assets to accelerate this growth. The Corporation has numerous initiatives that it will execute to ensure success.

During the month of June 2020, DST announced the signature of an agreement with a gold mining company for DST to perform process optimisation and an engineering study at the pre-feasibility level (+/- 25%) for a plant using the Corporation's GlassLock Process™ for the stabilisation of legacy arsenic bearing material at the gold mining company's operating gold mine in West Africa.

On July 31, 2020, the Corporation completed, and announced, a major improvement to its balance sheet by refinancing its debt. The Company has entered into two debt settlement agreements (the "Debt Settlement Agreements") with Dundee Resources Limited ("DRL") and Investissement Quebec ("IQ" and collectively with DRL the "Creditors"), with respect to the settlement of a portion of various debts of the Corporation, by the issuance of subordinated voting shares in the capital of the Corporation. Further details below in the appropriate sections.
