## Bam Bam Drilling Returns to Date the Greatest Gold, Silver and Copper Intersects at Majuba Hill, Nevada

- **Intersected 43 feet of 4.0% Cu and 204.4 g/t Ag**

VANCOUVER, BC — July 17, 2020 — Bam Bam Resources Corp. (CSE: BBR / OTC: NPEZF / FSE: 4NPA) ("**Bam Bam**" or the "**Company**") is pleased to report that core hole MHB-2 at the Majuba Hill Nevada flagship property has returned significant copper and silver values.

Starting from the surface MHB-2 intersected an outstanding interval of copper and silver. Using a length weighted average, MHB-2 returned extraordinary results:

- **146 feet from 0 to 146 feet @ 1.41% Cu and 97.6 ppm Ag** including 28 feet from 12 to 40 feet @ 0.74% Cu and 120.8 ppm Ag and 43 feet from 91 to 134 feet @ 4.0% Cu and 204.4 ppm Ag

The interval is the drill length, true width of mineralization is not yet known. It is comprised of 34 samples with 33 of the 34 samples greater than 0.05% copper.

<sup>1</sup>The copper equivalent ("CuEq") value for the drill interval with MHB-2 is:

- **146 feet from 0 to 146 feet @ 2.38% CuEq**

Copper CuEq% was calculated by converting length weighted silver values to copper using USD\$17/ounce silver and USD\$2.50/lb. copper.

The hole also had 10 feet of good gold values with:

- **10 feet from 122 to 132 feet @ 1.283 ppm Au** including 3.5 feet from 127 to 130.5 feet @ 2.33 ppm Au

*David Greenway, President & CEO, commented: "I couldn't be more excited about today's release! A clear and present confirmation on what I feel Majuba will continue to deliver. These MIDWAY point results in our planned drill program are really just a taste of what this property is evolving into. We have drilled 2 core holes which have absolutely demonstrated that the key elements are present for a significant copper, silver, and gold porphyry property at Majuba. We fully expect our in-progress RC drilling at the Majuba Ridge Extension Zone will expand the known oxide zone. This*

---

<sup>1</sup> Copper equivalent grade including gold and silver values and based on 100% metal recoveries. Copper grade equivalent calculation.  $Cu\ Eq\% = (Cu\ \% + ((Au\ grade\ x\ Au\ price) + (Ag\ grade\ x\ Ag\ price)) / (22.0462\ x\ Cu\ price\ x\ 31.0135\ g/t))$

*dollars in the ground approach is bringing Majuba forward as another major copper, silver, and gold porphyry project in Nevada. We remain open on all sides and at depth with grade continuing to improve at depth.”*

**Significant Porphyry-Style Setting**

The copper, silver, and gold mineralization occur in intrusive rocks with porphyry-style alteration. Three of the five intrusive assemblages at Majuba contain copper. Copper oxide mineralization at the surface is within the quartz-sericite-pyrite (QSP) zone. Surface geologic mapping and relogging of historic core holes has outlined alteration zonation, with a QSP zone that grades into a potassic zone. Oxidation at Majuba extends as deep as 800 feet. Significant sulfide copper mineralization has been drilled in historic drill hole MMX-24 at the QSP/Potassic boundary.

Bam Bam Hole MHB-2

Hole MHB-2 - <u>Copper and Silver: 101 to 130.5 ft</u>			
Interval	Cu	Ag (ppm)	From-To (feet)
5 ft	1.97%	93.6	101 to 106
1 ft	3.94%	70	106 to 107
3 ft	4.32%	419	107 to 110
2 ft	8.1%	316	110 to 112
5 ft	4.83%	280	112 to 117
4 ft	11.5%	487	117 to 121

## **Quality Assurance/Quality Control ("QA/QC") Measures, Chain of Custody**

The Company has implemented a QA/QC program using best industry practices at the Majuba Hill Project. Drill core is delivered by the company consulting geologist to the secure warehouse facility in Elko, Nevada. Drill core samples are sawn in half lengthwise and one half is placed in labeled cloth sample bags. The samples are then transported directly to the ALS Sample Prep Facility in Elko, Nevada. ALS then transports the prepared pulps to their analytical lab in Reno, Nevada or Vancouver, B.C. All samples are analyzed for copper, gold, silver, and 31 other elements. Gold is determined by ALS method Au-AA23 which is a fire assay with an AAS finish on a 30-gram split. Copper, silver and the remaining 31 elements are determined by ALS method ME-ICP61 which is a four-acid digestion and ICP-AES assay. Approximately 5% of the submitted samples are copper-gold-porphyry commercial standard reference material pulps, which are inserted in the analytical sample sequence. The sample rejects and remaining pulps will be retrieved from ALS.

## **About Majuba Hill Property**

The Majuba Hill Property encompasses 4,822 acres of surface and mineral rights that includes 3 patented lode mining claims and 632 acres of privately owned surface and minerals. The property is easily accessed via 23 miles of well-maintained dirt roads leading from U.S. Interstate 80.

## **Qualified Persons**

The scientific and technical information contained in this news release has been reviewed by E.L. "Buster" Hunsaker III, CPG 8137, a non-independent consulting geologist who is a "Qualified Person" as such term is defined under *National Instrument 43-101 - Standards of Disclosure for Mineral Projects ("NI 43- 101")*.

## **About Bam Bam Resources Corp.**

Bam Bam Resources Corp. (CSE: BBR / OTC: NPEZF / FSE: 4NPA) is engaged in the identification, review and acquisition of latter stage copper and copper/gold assets. The flagship project is the Majuba Hill copper gold project located 156 miles outside Reno, Nevada, USA. Management has been mandated to focus on safe, mining friendly jurisdictions and government regulations supportive of mining operations.

Neither the Canadian Securities Exchange nor its Market Regulator (as that term is defined in the policies of the Canadian Securities Exchange) accepts responsibility for the adequacy or accuracy of this release.
