DST offers metallurgical processes for the treatment of complex and refractory material from mining operations. DST's Technologies are applied for the extraction of precious metals and for the removal and stabilization of contaminants, such as arsenic from ores and concentrates. DST provides environmentally responsible, viable and efficient processes, capable of handling ores which may not be processed with conventional approaches due to metallurgical issues or environmental considerations.

The Company continues the commercialization of its Technologies and seeking to maximize the value of all of its assets to accelerate this growth. The Corporation has numerous initiatives that will pursue to ensure success.
