Property Details

The Bergby lithium project, located in central Sweden, 25km north of Gavle, was staked in 2016 and consists of three exploration permits covering a total of 1903Ha. A prospecting campaign with mapping and sampling was undertaken and identified an extensive lithium-mineralized spodumene pegmatite boulder field and outcrops. The discovery was followed up with two separate drilling campaigns in 2017 totaling 1525m of drilling through 33 drill holes to a maximum depth of 131.1m over an approximate 1500m strike length along intersections of potential lithium mineralization.
