Bam Bam Secures Core Drill for Spring Drilling at Majuba Hill Porphyry Copper

VANCOUVER, BC — January 14, 2022 — Bam Bam Resources Corp. (CSE: BBR / OTC: NPEZF / FSE: 4NPB) (“Bam Bam” or the “Company”) is pleased to announce that a Core Rig has been secured for drilling at the Majuba Hill Porphyry Copper Project in Pershing County Nevada. A retainer with Falcon Drilling is in place to guarantee that Bam Bam will be able to continue with the core drilling plans.

In 2021 Bam Bam drilled sixteen holes for a total of 4,539.5 meters (14,893.5 feet). Drilling focused on three areas.

- Majuba Known Copper Oxide
- DeSoto Copper Oxide Target
- Copper-Gold Target (*New Porphyry Discovery*-BBR News Nov. 8, 2021)

Early 2022 core drilling is planned to follow up on the surface geophysical and geochemical signatures that appear to be related to the copper porphyry alteration drilled in the diorite intrusive, that was discovered in the Copper-Gold Target area.

David Greenway, President and CEO, commented: *"I am very pleased that we have secured the core rig from Falcon. Their previous work and experience drilling on our programs will help us to quickly expand the emerging porphyry copper District at Majuba Hill."*

Quality Assurance/Quality Control ("QA/QC") Measures, Chain of Custody

The Company has implemented a QA/QC program using best industry practices at the Majuba Hill Project. The samples are transported from the BBR secure warehouse or directly from the drill to the ALS Sample Prep Facility in Reno or Elko, Nevada. ALS then transports the prepared pulps to their analytical lab in Reno, Nevada or Vancouver, B.C. Soil and rock chip samples are transported by the company directly to Elko or Reno, Nevada.

Drill core samples are sawn in half lengthwise and one half is placed in labeled cloth sample bags. All samples are analyzed for copper, gold, silver, and 33 other elements. Gold is determined by ALS method Au-AA23 which is a fire assay with an AAS finish on a 30 gram split. Copper, silver and the remaining 31 elements are determined by ALS method ME-ICP61 which is a four acid digestion and ICP-AES assay. Approximately 5% of the submitted samples are drill duplicates and copper-gold-porphyry commercial standard reference material pulps. The sample rejects and remaining pulps will be retrieved from ALS.

RSU Grant

Further, the Company has granted an aggregate 17,500,000 restricted share units (the "RSUs") to directors, officers and consultants of the Company. The RSUs are valid for a one-year term and are governed by the Company's RSU Plan, approved by the Company's shareholders on December 2, 2019.

Qualified Person

About Bam Bam Resources Corp.

Bam Bam Resources Corp. (CSE: BBR / OTC: NPEZF / FSE: 4NPB) is engaged in the identification, review and acquisition of latter stage copper and copper/silver/gold assets. This is in direct response to the growing worldwide demand and lack of supply for precious metals fueled by the Green New Deal in the US and most other developed nations with similar programs aimed at addressing climate change. Such programs

are heavily reliant on silver, gold and especially copper to produce Electric Vehicles and other renewable power sources, as well as building infrastructure to provide clean and affordable electricity.

The flagship project is the Majuba Hill copper, silver and gold District located 156 miles outside Reno, Nevada, USA. Management has been mandated to focus on safe, mining friendly jurisdictions where government regulations are supportive of mining operations.

Neither the Canadian Securities Exchange nor its Market Regulator (as that term is defined in the policies of the Canadian Securities Exchange) accepts responsibility for the adequacy or accuracy of this release.

On Behalf of the Board of Bam Bam Resources Corp.

"David Greenway"
