FORM 10

NOTICE OF PROPOSED SIGNIFICANT TRANSACTION (not involving an issuance or potential issuance of a listed security)[1]

Name of Listed Issuer: Intellistake Technologies Corp. (the "Issuer" or "Intellistake").

Trading Symbol: "ISTK"

Issued and Outstanding Securities of the Issuer Prior to Transaction:127,036,807

Date of News Release Fully Disclosing the Transaction: December 1, 2025

1. Transaction

1. Provide details of the transaction including the date, description and location of assets, if applicable, parties to and type of agreement (eg: sale, option, license, contract for Investor Relations Activities etc.) and relationship to the Issuer. The disclosure should be sufficiently complete to enable a reader to appreciate the significance of the transaction without reference to any other material: The Issuer and Smartlink AI Limited (a Singapore company doing business as Orbit AI) have entered into a Collaboration Framework Agreement dated November 28, 2025 (the "Agreement"). Pursuant to the terms of the Agreement, Intellistake intends to complete an initial investment of US$500,000 in Orbit AI in return for a 1% equity interest. Intellistake will also have the option to invest an additional US$1 million for equity at a valuation to be determined based on Orbit AI's next round of financing, which with the approval of Orbit AI may be increased to up to US$10 million, contingent on agreement on final terms and to be completed prior to the launch of DeStarlink Genesis-2 which is expected in 2026.

   Orbit AI is developing the "Orbital Cloud". The Orbital Cloud combines AI computing (DeStarAI), global connectivity (DeStarlink), and blockchain verification (Intellistake) to create an intelligent satellite network that can process and verify data directly in orbit. By shifting these processes off Earth, the platform removes dependence on centralized data centers, creating a faster, more secure, and censorship-resistant framework for AI systems. Intellistake intends to provide validator and node infrastructure to secure this system, acting as the blockchain verification layer within Orbit AI's Coordination Layer. This blockchain backbone is designed to enable satellites to authenticate data, coordinate AI workloads, and record verified transactions independently of terrestrial networks.
