

# Nexcel Metals Corp. Expands Burnt Hill Tungsten Project to 5,677 Hectares Through Additional Claim Staking

Vancouver, British Columbia--(Newsfile Corp. - March 24, 2026) - Nexcel Metals Corp. (CSE: NEXX) (OTCQB: NXXCF) (FSE: 2OH) ("Nexcel" or the "Company") is pleased to announce that it has significantly expanded its Burnt Hill Tungsten Project (the "**Project**") located in New Brunswick, Canada through the strategic staking of additional mineral claims contiguous to the existing property.

The newly staked claims increase the total Project size to approximately 5,677 hectares, representing a substantial expansion from the previous 1,540 hectares.

## Strategic Expansion of Highly Prospective Ground

The additional claims were selected based on their geological significance, specifically covering extensions of a granite-related structural corridor interpreted to be closely associated with the known tungsten mineralization at Burnt Hill.

This granite-hosted structural setting is considered highly prospective for tungsten mineralization and represents a key control on mineralizing systems within the district.

The expanded land package now provides Nexcel with:

- Increased exposure to favourable granite-associated mineralized trends
- Additional untested exploration targets
- Enhanced potential for new discoveries beyond the historically defined zones

## Positioning for Proposed 2026 Drill Program

With the significantly enlarged property footprint, Nexcel is now positioned to evaluate a broader range of targets as part of its exploration strategy.

The Company is currently advancing plans for a Phase 1 drill program scheduled for Summer 2026, which will aim to:

- Confirm and expand known zones of tungsten mineralization
- Test newly identified geophysical and geological targets
- Evaluate the broader mineralized system across the expanded property

The additional claims meaningfully enhance the Company's ability to generate and prioritize drill targets across multiple zones within the Project area.

Hugh Rogers, CEO of Nexcel commented, *"this strategic expansion of the Burnt Hill Project significantly strengthens our control over a highly prospective tungsten system. By staking ground along the interpreted granite fault associated with known mineralization, we are extending our footprint into areas we believe have strong potential to host additional tungsten zones. With the Project now more than tripling in size, we have created a much larger exploration pipeline and are well positioned to generate and test multiple high-quality targets as we move toward our planned Summer 2026 drill program."*

## About the Burnt Hill Tungsten Project

The Burnt Hill tungsten/molybdenum property now covers approximately 5,677 hectares in central New Brunswick and hosts a NI 43-101 indicated resource of 1,761,000 tonnes within an open pit and underground averaging 0.292% WO<sub>3</sub>, 0.007% MoS<sub>2</sub> and 0.008% SnO<sub>2</sub>, along with a further 1,520,000 inferred tonnes averaging 0.263% WO<sub>3</sub>, 0.008% MoS<sub>2</sub> and 0.005% SnO<sub>2</sub>, as presented below. Also presented below, extracted from the 2013 Resource Report, is a statement of contained metal. In addition to the deposit area of the property, there are several other areas of identified tin, tungsten and molybdenum mineralization within the property boundary not yet at the resource stage.<sup>1</sup>

**Table 14-4: Burnt Hill Resource Estimate**

PARAMETERS		INDICATED				INFERRED			
Mining	Cut-Off %	TONNES	WO3	MoS2	SnO2	TONNES	WO3	MoS2	SnO2
Method	WO3		(%)	(%)	(%)		(%)	(%)	(%)
Open Pit	0.07	527,000	0.303	0.005	0.005	82,000	0.147	0.003	0.003
Underground	0.16	1,234,000	0.287	0.008	0.009	1,438,000	0.27	0.008	0.005
Total		1,761,000	0.292	0.007	0.008	1,520,000	0.263	0.008	0.005

- The terms Inferred Resource and Indicated Resource are in compliance with the CIM Standards on Mineral Resources and Reserves.
- Inferred resources are uncertain in nature as there has been insufficient exploration to define these as Indicated or Measured Resources.
- Mineral Resources do not have a demonstrated economic viability and may be affected by economic, environmental, or other factors.
- All tonnages have been rounded to the nearest 1,000 tonnes.

The contained metal represented by this resource statement after converting the metal compound to contained metal equivalents for the respective metal compounds is as follows:

(0.303% WO3) (79.29% Weight Percent Tungsten) (2,205 lbs/tonne) (527,000 tonnes) = 2.79  
1,000,000

Mineral Resources Contained Metal		Tungsten (million pounds)	Molybdenum (thousand pounds)	Tin (thousand pounds)
Open Pit	Indicated	2.79	34.82	45.76
Underground	Indicated	6.19	130.46	192.867
Total		8.99	162.91	244.64
Open Pit	Inferred	0.21	3.25	4.27
Underground	Inferred	6.79	152.03	124.86
Total		6.99	160.7	131.98

## **Forward-Looking Statements**

All statements included in this press release that address activities, events or developments that Nexcel expects, believes or anticipates will or may occur in the future are forward-looking statements. Such statements may involve, but are not limited to, statements with respect to the exploration and development of the Company's mineral properties. These forward-looking statements involve numerous assumptions made by Nexcel based on its experience, perception of historical trends, current conditions, expected future developments and other factors it believes are appropriate in the circumstances. In addition, these statements involve substantial known and unknown risks and uncertainties that contribute to the possibility that the predictions, forecasts, projections and other forward-looking statements will prove inaccurate, certain of which are beyond Nexcel's control. Readers should not place undue reliance on forward-looking statements. Except as required by law, Nexcel does not intend to revise or update these forward-looking statements after the date hereof or revise them to reflect the occurrence of future unanticipated events.
