

# Argo Acquires Additional Mineral Claims at the Hurdman Silver-Zinc Project

Toronto, Ontario--(Newsfile Corp. - April 14, 2026) - Argo Gold Inc. (CSE: **ARQ**) (OTC Pink: **ARBTF**) (XFRA: **A2ASDS**) (XSTU: **A2ASDS**) (XBER: **A2ASDS**) ("**Argo**" or the "**Company**") recently acquired through staking an additional 35 square kilometres at the Hurdman Silver-Zinc Project, located 120 km north of Timmins, Ontario, and now holds 60 square kilometres covering the known silver-zinc mineralization, as well as structural and geophysical targets that are considered prospective for additional silver and zinc mineralization. See Map 1.

The Hurdman Silver-Zinc mineralization occurs 450 metres along strike as Silver-Zinc rich semi-massive to massive sulphides, dipping 15 to 25 degrees north, within 150 metres of surface. Historical drill widths vary from 1 to 38 metres in true thickness, and the mineralization remains open in all directions. One significant drill intercept is 3.0% zinc and 12.1 g/t silver over 23.6 metres. There are also significant gold intercepts including 48.7 g/t Au over 0.5 metres and 2.5 g/t Au over 4.1 metres. Hurdman occurs at the juncture of the Quetico Metasedimentary Belt and the Kapuskasing Structural Zone where there are numerous untested conductors and structural corridors that may host additional mineralization.

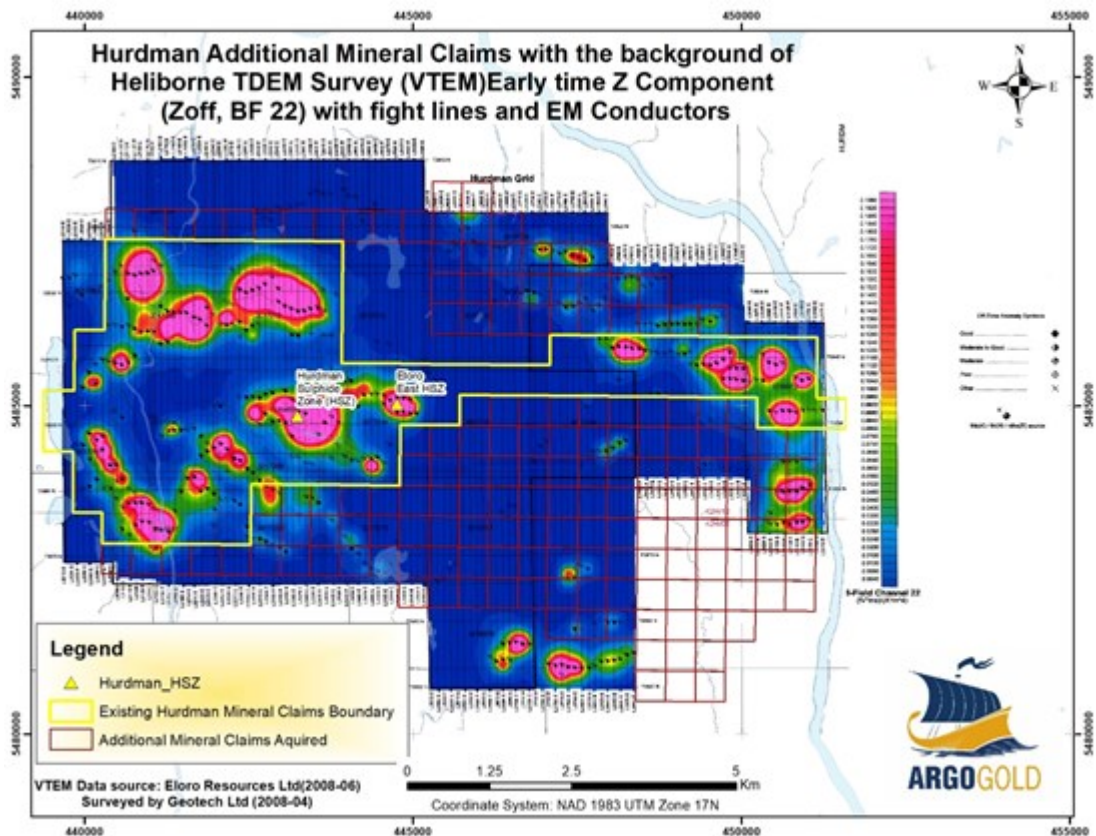

## National Instrument 43-101 Disclosure

The technical information in this news release has been reviewed and approved by Michael Guo, who is a "Qualified Person" as defined in National Instrument 43-101. Historical geochemical, drilling results and geological descriptions quoted in this news release are from historical data, previous news releases, a technical report on Hurdman dated March 2018, and from information provided by the Government of Ontario. Management cautions that historical results or discoveries on adjacent or nearby mineral properties are not necessarily indicative of the results that may be achieved on Argo's mineral properties.
