

FORM 7

MONTHLY PROGRESS REPORT

Name of Listed Issuer: Benjamin Hill Mining Corp. (the "Issuer").

Trading Symbol: BNN

Number of Outstanding Listed Securities: 56,198,437

Date: As at July 5, 2022

Report on Business

1. Provide a general overview and discussion of the development of the Issuer's business and operations over the previous month. Where the Issuer was inactive disclose this fact.

On June 3, 2022, the Issuer announced initial drill results from the El Fierro Exploration Zone, which hosts several prospective mineralized veins that have returned encouraging copper and gold assays from near surface intervals. Additionally, good gold assays at depth confirm a metals enriched hydrothermal systems that merits further investigation.

On June 8, 2022 the Issuer also confirmed the extension in three directions of copper-gold mineralization in the Sonora Copper Vein System, which point to a significant copper mineralized block that is open that can be further enlarged through additional drilling.

2. Provide a general overview and discussion of the activities of management.

The Issuer is continuing its work program on its Benjamin Hill property in Sonora, Mexico (the "Sonora Gold Project").

3. Describe and provide details of any new products or services developed or offered. For resource companies, provide details of new drilling, exploration or production programs and acquisitions of any new properties and attach any mineral or oil and gas or other reports required under Ontario securities law.

The Issuer continued announced additional assay results from the Sonora Gold Project. This round of assays focused on mineralized structures in the El Fierro Zone (see enhanced version of Figure 1: https://orders.newsfilecorp.com/files/8680/126345_5173c8d6c45f4a2e_001full.jpg). The drilling program explored for the presence and continuity of metallic mineralization found in outcroppings at surface in epithermal veins, skarn zones and hydrothermal breccias. BHM also tested for a possible magmatic source of mineralization as indicated by chargeability highs in the recent IP/Resistivity geophysical survey.)

The El Fierro Zone area encompasses 958 hectares out of a total 6391 hectares on the Project. Eleven exploratory drill holes totalling 1,589 meters were completed to test two vein systems and a skarn occurrence.

The first vein system oriented in a northwest - southeast direction, dipping shallowly to the northeast and is mapped at surface approaching 1.2 km in length (see Figure 1 above). These veins are composed of quartz-barite with sulfides and primary oxides. The second vein system contains a sets of parallel vein breccias striking northeast to southwest and dipping steeply to the southeast. The veins are composed of quartz, with primary sulfides, primary oxides, and hydroxides. The second vein system is mapped at surface for 3.9 km. All the veins are hosted in granites and a volcano-sedimentary sequence.

The El Fierro Zone also hosts artisanal pits and shallow shafts, developed for the exploitation of quartzbarite veins-breccias containing copper mineralization.

The results of the program are very encouraging with drill holes SGB-22-19, SGB-22-20, SGB-22-21, SGB-22-23, SGB-22-26, SGB-22-27, and SGB-22-31 intersecting mineralized veins of the first vein system. Figure 2 (see: https://orders.newsfilecorp.com/files/8680/126345_5173c8d6c45f4a2e_002full.jp) shows a geological map and a projected cross section that illustrates a possible interpretation of vein continuity between boreholes.

Highlights include:

- SGB-22-23 - 1.25 m of 0.25% Cu from 18.5 m - 19.75m
- SGB-22-24 - 1.25 m of 0.67 % Cu from 26.5 m - 27.75 m
- SGB-22-26 - 0.95 m of 0.39 g/t Au from 4.35 m - 5.3 m, and a 2nd intersection with an additional 1.5 m of 0.25% Cu from 4.35 m - 8.0 m
- Including 1.45 m of 0.26% Cu from 5.3 m - 6.75 m, 1.5 m of 0.25% Cu from 42.3 m - 43.8 m, and 0.95 m with 0.39 g/t Au.
- SGB-22-27 - 1.7 m of 0.25 % Cu from 52.85 m to 54.55 m, a second interval of 3.1 m of 0.70% Cu, with 1.1 m of 1.44 % Cu from 90.8 m - 93.9 m
- Previously reported drill hole SGB-22-21: 3 m of 3.54% Cu in drill hole
- Including 0.6 m of 10% Cu, 2.11 g/t Au and 52 g/t Ag from 11.5 m - 14.6 m
- Drill holes SGB-22-28, SGB-22-29 and SGB-22-30 intersected the second vein system which strikes north-east south-west and dips steeply to the southeast. Notably, drill hole SGB-22-30 cut several veins composed of quartz, sulfides, primary oxides and hydroxides.
- Drill hole SGB-22-24 encountered disseminated copper oxide mineralization in a skarn.
- SGB-22-30 - 0.4 m of 4.42 g/t Au from 127.8 m -128.2 m and 0.45 m of 0.55 % Cu and 0.4 g/t Au from 184.8 m - 185.25 m
- SGB-22-31 - 1.8 m of 0.41 % Cu, with 0.5 m with 0.36 g/t Au.

Note: Further work is required to better understand the structural controls on mineralization and the true widths of mineralization.

The Issuer further announced the southern continuity of the previously announced Sonora Copper Vein System. This round of assays focused on mineralized structures in the Sonora Copper zone of the Sonora Gold

Project (see Figure 1 at: https://orders.newsfilecorp.com/files/8680/126817_69ce77d9f4a87b0e_001full.jpg). The drilling program targeted metallic mineralization found in outcroppings at surface in epithermal veins and hydrothermal breccias.

The Sonora Copper Exploration area hosts copper-gold mineralized quartz breccia veins exploited by artisanal miners as evidenced by several underground adits and vaults seen on the property (i.e., four adits totaling 1,200 meters with a series of sublevels and interconnected shafts). The Sonora Copper quartz breccia vein system consists of two major sub-parallel veins, which our geologists believe, could combine into a single body at depth and are likely linked to a fertile magmatic source as interpreted from the recent IP Resistivity geophysical survey. Outcrops of the Sonora Copper vein system have been mapped over a surface length of approximately 850 m (see Figure 1). The vein structures are composed of quartz with barite, sulfides and primary oxides with coinciding alteration halos. The veins are hosted in granitoids and volcano-sedimentary rocks, with a close relationship to porphyry dikes.

A total of four drill holes tallying 837 m were completed in the Sonora Copper exploration zone (SGD-22- 001, 02, 33, 34). All four drill holes cut two parallel mineralized quartz veins that exhibit a hydrothermal brecciation texture with coincident hydrothermal alteration in the surrounding rock (phyllic alteration and chlorite-epidote-carbonate alteration). These first four holes have delineated a block of over 450 meters in length and up to 103 meters measured depth of continuous mineralization, with thicknesses up to 40 meters. The consistent intercepts suggest there is open potential to track mineralization both laterally and vertically. Our interpretation of the recent IP resistivity geophysical survey suggests the vein system continues at depth and may widen with depth, suggesting a mineralized body which could be interpreted as a possible mineralized magmatic source for the Sonora Copper vein system (see Figure 2:

https://orders.newsfilecorp.com/files/8680/126817_69ce77d9f4a87b0e_002full.jpg).

Previously reported May 24, 2022, drill hole SGD-22-001 intersected two mineralized veins striking north south and dipping steeply to the west. Assay results show 27 m of 0.55% Cu and includes highlight intervals of:

- 1 m of 1.69% Cu from 31.1 m - 32.1 m.
- 1 m of 1.36% Cu from 34.1 m - 35.1 m
- 1.5 m of 1.46% Cu from 36.6 m - 38.1 m
- 2 m of 0.38 g/t Au from 30.1 m - 32.1 m

Previously reported May 24, 2022, drill hole SGD-22-002 intersected two mineralized veins striking north south and dipping steeply to the west. Highlights of the intersections include:

- 6 m of 1.18% Cu from 20.25 m - 26.25 m
including 1.45 m of 103.4 g/t Ag

- 5.1 m of 1.26% Cu from 71.3 m - 76.4 m
including 1.94 g/t Au from 73.9 m - 76.4 m

Drill hole SGD-22-33 confirms the continuation of copper mineralization intersected in two mineralized veins from drill holes SGA-22-01 and SGA-22-02 by intersecting:

- 1.45 m of 0.62% Cu from 50.3 m - 51.75 m
- 4.2 m of 0.52% Cu from 68.3 m - 72.5 m
including 1.7 m of 1.1 g/t Au from 69.05 m - 70.75 m

Drill hole SGD-22-34 proves continuation of copper mineralization already by intersecting:

- 8.7 m of 0.58% Cu. including 1.85 m of 1.77% Cu,
and 1.25 m of 0.49 g/t Au from 95.3 m to 104 m drilled depth
(See Figure 3: Cross section showing borehole traces with gold and Copper values, dashed outlines of the Sonora Copper quartz breccia vein system and the historical adits in the Sonora Copper zone at:

https://orders.newsfilecorp.com/files/8680/126817_69ce77d9f4a87b0e_003full.jpg; Table 1 Assay Highlights from Drill Hole SGD-22-033 at: https://orders.newsfilecorp.com/files/8680/126817_69ce77d9f4a87b0e_004full.jpg and Table 2. Assay Highlights from Drill Hole SGA-22-34 at: https://orders.newsfilecorp.com/files/8680/126817_69ce77d9f4a87b0e_005full.jpg)

Note: True widths are not known at this time and requires additional exploration to confirm size.

This inaugural round of drill results confirms copper gold mineralization on the Sonora Gold project. Our geologists believe the mineralization seen at surface and in our drill holes could be the result of a metals laden porphyry at depth. This concept is corroborated by the presence of geophysical anomalies recorded on the property - magnetometry (gravity) highs as seen on a historical Geological Survey of Mexico magnetometer survey and chargeability highs as recorded during an Induced Polarization and Resistivity geophysical survey conducted by BNN earlier this year on the property.

4. Describe and provide details of any products or services that were discontinued. For resource companies, provide details of any drilling, exploration or production programs that have been amended or abandoned.

Not applicable.

5. Describe any new business relationships entered into between the Issuer, the Issuer's affiliates or third parties including contracts to supply products or services, joint venture agreements and licensing agreements etc. State whether the relationship is with a Related Person of the Issuer and provide details of the relationship.

Not applicable.

6. Describe the expiry or termination of any contracts or agreements between the Issuer, the Issuer's affiliates or third parties or cancellation of any financing arrangements that have been previously announced.

Not applicable.

7. Describe any acquisitions by the Issuer or dispositions of the Issuer's assets that occurred during the preceding month. Provide details of the nature of the assets acquired or disposed of and provide details of the consideration paid or payable together with a schedule of payments if applicable, and of any valuation. State how the consideration was determined and whether the acquisition was from or the disposition was to a Related Person of the Issuer and provide details of the relationship..

Not applicable.

8. Describe the acquisition of new customers or loss of customers.

Not applicable.

9. Describe any new developments or effects on intangible products such as brand names, circulation lists, copyrights, franchises, licenses, patents, software, subscription lists and trade-marks.

Not applicable.

10. Report on any employee hirings, terminations or lay-offs with details of anticipated length of lay-offs.

Not applicable.

11. Report on any labour disputes and resolutions of those disputes if applicable.

Not applicable.

12. Describe and provide details of legal proceedings to which the Issuer became a party, including the name of the court or agency, the date instituted, the principal parties to the proceedings, the nature of the claim, the amount claimed, if any, if the proceedings are being contested, and the present status of the proceedings.

Not applicable.

13. Provide details of any indebtedness incurred or repaid by the Issuer together with the terms of such indebtedness.

Not applicable.

14. Provide details of any securities issued and options or warrants granted.

Not applicable.

Security	Number Issued	Details of Issuance	Use of Proceeds ⁽¹⁾

(1) State aggregate proceeds and intended allocation of proceeds.

15. Provide details of any loans to or by Related Persons.

Not applicable.

16. Provide details of any changes in directors, officers or committee members.

Not applicable.

17. Discuss any trends which are likely to impact the Issuer including trends in the Issuer's market(s) or political/regulatory trends.

Not applicable.

Certificate Of Compliance

The undersigned hereby certifies that:

1. The undersigned is a director and/or senior officer of the Issuer and has been duly authorized by a resolution of the board of directors of the Issuer to sign this Certificate of Compliance.
2. As of the date hereof there were is no material information concerning the Issuer which has not been publicly disclosed.
3. The undersigned hereby certifies to the Exchange that the Issuer is in compliance with the requirements of applicable securities legislation (as such term is defined in National Instrument 14-101) and all Exchange Requirements (as defined in CNSX Policy 1).
4. All of the information in this Form 7 Monthly Progress Report is true.

Dated September 9, 2022.
