### Exploration Resumes on Renforth's Copper/Silver Discovery at Malartic West

**Renforth Resources Inc. (CSE – RFR) (OTC US– RFHRF) (WKN - A2H9TN)** (“Renforth” or the “Company”) would like shareholders to know that exploration on the Beauré Copper/Silver Discovery on our wholly owned Malartic West Property, contiguous to the Canadian Malartic Mine Property in Malartic, Quebec, has resumed.

“Renforth has a copper/silver discovery which extends over 165m in surface sampling, which is a true discovery, there is no historical record. The strike length is entirely open and it has never been drilled. It is next door to Canada’s largest open pit gold mine, in an established mining camp, literally right beside a logging road a couple of kms. off of a regional road. We do not know why this mineralization is there yet, or the extent of the copper and silver system, but we do know these rocks, in this location, with copper and silver prices rising, deserve additional exploration. So that is what we will do” states Nicole Brewster, President and CEO of Renforth.

#### Beauré Copper/Silver Discovery Summary

Beauré was first sampled by SOQUEM, 6 grab samples were taken, the results as follows;

Sample	UTM E	UTM N	Cu ppm	Cu %	Au g/t	Ag g/t
B00089335	702317	5340608	93.5		<0.005	<0.02
B00089336	702317	5340609	12.6		<0.005	<0.02
<b>B00089337</b>	<b>702317</b>	<b>5340610</b>	<b>13100</b>	<b>1.31</b>	<b>&lt;0.005</b>	<b>2.45</b>
B00089340	702318	5340609	26.3		<0.005	<0.02
<b>B00089341</b>	<b>702319</b>	<b>5340610</b>	<b>80800</b>	<b>8.08</b>	<b>0.01</b>	<b>8.43</b>
<b>B00089342</b>	<b>702320</b>	<b>5340610</b>	<b>21100</b>	<b>2.11</b>	<b>0.01</b>	<b>3.56</b>

(refer to press release of Sept. 4, 2019)

Renforth, in the summer of 2019, confirmed the presence of copper and silver mineralization at Beauré with results that included the following;

Sample	Desc	Ag g/t	Cu g/t	Cu %
<b>369110</b>	<b>Weakly silicified arkose, ~5mm quartz stockwork, ~5% pyrite clots</b>	<b>6.62</b>	<b>3590</b>	<b>.359</b>
<b>2427494</b>	<b>Quartz + very coarse chalcopyrite clots, tight dissemination of fine pyrite (~5% sulphide total)</b>	<b>5.73</b>	<b>2550</b>	<b>.255</b>
<b>2427495</b>	<b>Weakly silicified arkose with irreg. quartz-carbonate stockwork, occasional very coarse chalcopyrite clots:</b>	<b>1.75</b>	<b>820</b>	<b>0.82</b>

(refer to press release Oct. 31, 2019)

Fall 2019 work, which extended the copper/silver mineralization to a surface strike length of 165m, ended due to weather, with mapping of the ground which was stripped unable to be completed due to early snow cover. Grab sample results obtained included;

Sample	Desc	Ag g/t	Cu g/t	Cu %
B564976	Blast pit rubble: quartz-carbonate stkwk in silicified sediments, 5% coarse pyrite clots, poss. bornite flake	5.46	8950	0.895
B564977	blast pit rubble: quartz-carbonate stkwk in silicified sediments, 1% coarse pyrite, 1% coarse chalcopyrite clots	3.04	6390	0.639
B564993	rusty quartz stockwork in chloritic host, 2% chalcopyrite stringers	8.31	8750	0.875
B564994	rubble from blast pit. Quartz ~5cm thick + stkwk in greywacke. Very coarse pyrite+pyrrhotite clots	1.75	8890	0.889

(refer to press release of Dec. 11, 2019)

### **Additional Exploration Updates**

Renforth has completed the previously announced blasting program on our New Alger Property and the Discovery Veins surface gold mineralization, stripped over 275m within a known 500m strike length in the Pontiac sediments, which is still open. Renforth is now drilling on the Discovery Veins, within and outside of the stripped area. The drill program will continue under the supervision of one geologist, with a second geologist undertaking the renewed exploration at Beaupré.

In addition, Renforth is awaiting assay results from our June 2020 Beep Mat/Prospecting work which included sampling on our Parbec gold property and our Surimeau polymetallic property.

Brian H. Newton P. Geo is a “qualified person” pursuant to the requirements of National Instrument 43-101. He has reviewed and approved the technical information in this press release.

### **ABOUT RENFORTH**

Renforth Resources Inc. is a Toronto-based gold exploration company with six wholly owned surface gold bearing properties located in the Provinces of Quebec and Ontario, Canada.

In Quebec Renforth holds the New Alger and Parbec Properties, in the Cadillac and Malartic gold camps respectively, with gold present at surface and to some depth, located on the Cadillac Break. Each of these properties carries an open-pit constrained 43-101 resource. In both instances’ additional gold bearing structures, other than the Cadillac Break, have been found on each property and require additional exploration. Renforth also holds Malartic West, contiguous to the western boundary of the Canadian Malartic Mine Property, located in the Pontiac Sediments, this property is gold bearing and was the recent site of a copper discovery. Renforth has acquired the Surimeau property, also contiguous to Canadian Malartic and the southern border of the Malartic West property. Surimeau hosts polymetallic mineralization and represents the

consolidation of four historic properties into one for the first time. In addition to this Renforth has optioned the wholly owned Denain-Pershing gold bearing property, located near Louvicourt, Quebec, to O3 Mining Inc.

In Ontario, Renforth holds the Nixon-Bartleman surface gold occurrence west of Timmins, Ontario, drilled, channeled and sampled over 500m – this historic property also requires additional exploration to define the extent of the mineralization.
