

Canter Resources Receives NOI Approval and Exploration Well Permit for the Columbus Lithium-Boron Project

Vancouver, British Columbia, March 6, 2024 – Canter Resources Corp. (CSE:CRC | OTC:CNRCF | FRA:601) (“Canter” or the “Company”) is pleased to report that the Company has received approval from the Bureau of Land Management for its previously submitted Notice of Intent (NOI) (see press release dated February 6, 2024). The Company has also received its permit from the Nevada Division of Minerals for its initial exploration well at the Columbus Lithium-Boron Project (“Columbus”) located near Tonopah, Nevada.

“With our permits and approved NOI in place at Columbus we have reached another key milestone and are now in position to finalize our engagements with contractors and ramp up field activities,” stated Joness Lang, CEO of Canter. “Our Phase I program will include further surface sampling, shallow Geoprobe drilling and an initial exploration well as we take aim at delineating a significant lithium brine resource in Nevada.”

These regulatory milestones pave the way for Canter to launch its Phase I exploration program, designed to rapidly assess the lithium and boron mineral resource potential within the Columbus Basin. The low-cost Geoprobe drilling will include 10 holes completed along pre-existing roads, efficiently testing for near-surface lithium-bearing brines. Dirt work will commence concurrently with drill site preparation for the Company’s first exploration well. The Company will provide additional updates shortly as contractors are secured and field work commences.
