

FORM 7

MONTHLY PROGRESS REPORT

Name of Listed Issuer: Canadian Metals Inc. (the "Issuer").

Trading Symbol: CME

Number of Outstanding Listed Securities: 73,309,794

Date: May 5, 2022

This Monthly Progress Report must be posted before the opening of trading on the fifth trading day of each month. This report is not intended to replace the Issuer's obligation to separately report material information forthwith upon the information becoming known to management or to post the forms required by Exchange Policies. If material information became known and was reported during the preceding month to which this report relates, this report should refer to the material information, the news release date and the posting date on the Exchange website.

This report is intended to keep investors and the market informed of the Issuer's ongoing business and management activities that occurred during the preceding month. Do not discuss goals or future plans unless they have crystallized to the point that they are "material information" as defined in the Policies. The discussion in this report must be factual, balanced and non-promotional.

General Instructions

- (a) Prepare this Monthly Progress Report using the format set out below. The sequence of questions must not be altered, nor should questions be omitted or left unanswered. The answers to the items must be in narrative form. State when the answer to any item is negative or not applicable to the Issuer. The title to each item must precede the answer.
- (b) The term "Issuer" includes the Issuer and any of its subsidiaries.
- (c) Terms used and not defined in this form are defined or interpreted in Policy 1 – Interpretation and General Provisions.

Report on Business

1. Provide a general overview and discussion of the development of the Issuer's business and operations over the previous month. Where the Issuer was inactive disclose this fact.

Canadian Metals specializes in the acquisition, exploration, evaluation, and development of mineral properties in Quebec and New Brunswick. The Company currently focuses on the exploration and development of iron and base metal properties, located in the province of Quebec and New Brunswick.

2. Provide a general overview and discussion of the activities of management.

COVID-19 Impact on Canadian Metals Inc: Canadian Metals is currently reviewing its strategy, planning an optimizing phase on a feasibility study that was completed in 2019 and looking at opportunities linked with its mining assets. The company's activities are minimal, and it has reduced its spending to a minimum, therefore Covid-19 has minimal to no impact on CME.

Please refer to SEDAR.com for detailed information.

3. Describe and provide details of any new products or services developed or offered. For resource companies, provide details of new drilling, exploration or production programs and acquisitions of any new properties and attach any mineral or oil and gas or other reports required under Ontario securities law.

The Company received results of the 42 assays conducted in the LG Discovery Zone, of which 30 samples reported more than 1 g/t Au. The LG Discovery Zone is located 800 meters NE of the Clarinda Zone and 2450 meters SW of the Arleau Zone where high-grade gold samples were collected and assayed during the 2020 exploration and trenching program. Historic bedrock samples grading up to 2.40 g/t Au at Clarinda have been observed in brecciated quartz veins at the contact between the sediments and the altered rhyolite. The contact sediment/rhyolite is hosting most of the high-grade gold samples collected along the Goldstrike Gold Trend (GGT) so far. Also, Silver-Antimony and bismuth mineralization were encountered in the trenches. When added to the geological model, they will be used as high-grade gold pathfinders.

The GGT is represented as an altered and brecciated rhyolite unit hosting significant gold showings and occurrences followed by trenching over a strike length of about 3.0 km. The favourable unit (rhyolite) is similar and parallel to the structures hosting the Clarinda and Arleau Zones.

The gold bearing quartz veins are mostly perpendicular to the major trend and contain the gold mineralization. The LG Discovery Zone and the surrounding area have never been drilled before.

The Goldstrike property which includes three (3) zones named Clarinda, Arleau and LG Discovery, is covering more than 6580 hectares. The project is located about 40 km NW of Bathurst with full road access and existing road crosscuttings the property. CME is currently focusing its field work on the LG Discovery Zone

These impressive new results together with data and interpretation from initial ground IP and aerial MAG-TDEM survey (close to completion) will lead to the drilling target definition for the first ever 2022/2023 drilling program along the Goldstrike Gold Trend (GGT). The first step is to proceed with a major stripping area on the GGT where the main objective will be to better define and locate the fertile contact between the sediments and rhyolite along the GGT.

Also, the district-scale Airborne MAG-TDEM survey (1,352l-km) of the Goldstrike Gold Project is almost finalized and will help define the geophysical signature of gold-bearing rhyolite.
