On May 10, 2021, the Company reported that it had completed a second round of soil sampling in the highly prospective Southeast block of its Abriaqui project. The area has historically returned very high grade gold values from multiple veins and includes a magnetic anomaly coincident with one of the best soil areas. FenixOro geologists recently expanded the soil sampling grid to cover more of the known vein and magnetic trends. The results are extremely promising and as a result, this previously undrilled block will receive more attention in the Phase 2 drilling program that is currently being mobilized.

- A significant 600m long anomaly defined by +1 g/t gold-in-soil is open to the east.*
- Soil sampling has been shown to be an excellent indicator of non-outcropping veins as seen in the area of hole P003 where 24 veins were intersected in an area where only eight were mapped on surface.*
- Soil anomalies, vein/mine mapping and sampling, and previously reported magnetic anomalies define additional targets for drill testing during an expanded Phase 2 which is in the mobilization phase.*
- Results are reported for 180 new soil samples and the program is being expanded to include the entire Southeast block.*
