

Far Resources Announces Results of Rock Chip Assays from their Zoro Lithium Property, Snow Lake Area, Manitoba

July 27, 2016 – Vancouver, BC: Far Resources Ltd (CSE:FAT) (FSE:FOR) (“Far Resources” or the “Company”) is pleased to announce that it has received the analyses of seven composite rock chip samples collected from historic blasted trenches during a recent visit to the expanded Zoro property. The purpose of the sample collection was to compare lithium contents in rock samples analysed with modern analytical technology to results from historic assays.

Analyses for these samples are presented as percentages of Li₂O in Table 1. Results of recently collected chip samples compare favourably with the range of historic values reported in Manitoba government assessment files. Dykes 2, 4 and 5 are present on recently optioned adjacent ground.

These results confirm the presence of significant lithium mineralization present as spodumene-bearing pegmatite dykes on the Zoro property and will assist in planning an upcoming drill program (*cf.* News Release July 19, 2016).

Dyke	Sample	Far Resources Ltd.	Historic Assays
		Li ₂ O%	Li ₂ O%
2	2-1	2.71	1.66
2	2-2	3.53	1.69
4	4-1	2.41	1.12
5	5-1	6.11	2.26
5	5-2	6.35	2.22
5	5-3	1.78	2.42-7.28*
5	5-4	1.46	

Table 1. Summary of lithium assay data from historic exploration and recent confirmatory exploration by Far Resources Ltd.

*Historic range in Li₂O contents from Dyke 5 rock chip samples.

The scientific and technical information regarding Far Resources’ lithium claims contained in this news release has been approved by Mark Fedikow, P.Geo., a consultant of Far Resources and a “qualified person” as defined in NI 43-101.

About the Company

Far Resources Ltd. is an exploration company, publicly traded on the Canadian Securities Exchange under the symbol FAT, focused on the identification and development of high potential mineral opportunities in stable jurisdictions.
