Newlox Pouring More Doré at Upgraded Plant, Central America

Vancouver, BC, 26 July 2018 – Newlox Gold Ventures Corp. (“Newlox” or the “Company”) (CSE: LUX | Frankfurt: NGO) is pleased to announce continued pouring of gold doré at its remediation and precious metals recovery facility in Central America. Following the Company’s inaugural pour of gold doré on April 23rd, 2018, efficiencies have been steadily improving month-by-month.

Gold doré pours are now a regular occurrence and precious metals sales are supporting continued testing of innovative environmental reclamation and precious metals recovery technology. Performance at the processing plant is advancing as a result of the continued application of optimization recommendations made by the Company’s experienced metallurgist and process engineers.

This month, handling time in the beneficiation stage has been reduced by 75% since the Company installed a new mechanical agitation system, improved the aeration system, optimized the solid/liquid ratio controls, enhanced reagent dosing, and fabricated an automatic material handling system.

The stripping and electrowinning systems are being improved to further enhance capacity and efficiency. To date, additional anodes and cathodes have been added, the fluid flow pattern has been optimized, and the stripping circuit has been pressurized, resulting in improved recovery and reduced operating cost. New tanks and electronics are currently being installed to enhance both capacity and overall recovery.

Ryan Jackson, President of Newlox Gold comments:

“Our operations team is maintaining regular gold doré pours. Encouragingly, we see a month-by-month increase in yields. Newlox is on course to achieve its goal of a robust, socially and environmentally positive enterprise, generating value for shareholders and local stakeholders alike. Once we have achieved full-scale commercial operations, the Company will be ready to expand its socially and environmentally responsible resource business at locations already identified in the immediate area.”

About Newlox Gold Ventures Corp.

Newlox Gold Ventures Corp. recovers both residual precious metals and contaminants from historical waste accumulated from more than a century of inefficient artisanal and small-scale mining in politically and socially stable jurisdictions.

Agreements with local artisanal mining cooperatives provide steady supplies of feedstock for the Company’s first processing plant in Central America. Hundreds of years of mining history in Latin America and current inefficient artisanal processing ensure ample opportunities for the Company to grow its business model.

Newlox occupies a pioneering niche within the extractive industry where it can apply innovative processing techniques to not only recover precious metals but also to effect positive change in the environmental and social landscape through its operations.

Forward-Looking Information

The information in this news release includes certain information and statements about management's view of future events, expectations, plans and prospects that constitute forward-looking information. Forward-looking information includes, but is not limited to, the completion of the work programs currently underway and the results of these programs. These statements are based on assumptions that are subject to significant risks and uncertainties. Because of these risks and uncertainties and as a result of a variety of factors, the actual results, achievements, or performance may vary materially from those anticipated and indicated by these forward-looking statements. The material risk factors that could cause actual results to differ include the risk that work undertaken by the Company may have unintended effects, the risk of delays in completing work, and the risk that the Company may not be able to raise sufficient funds and Force Majeure. Although the Company believes that the expectations reflected in the forward-looking information are reasonable, it can give no assurances that the expectations of any forward-looking information will prove to be correct. Except as required by law, the Company disclaims any intention and assumes no obligation to update or revise any forward-looking information to reflect actual results, whether as a result of new information, future events, changes in assumptions, changes in factors affecting such forward-looking statements or otherwise.

Neither Canadian Securities Exchange nor its Regulation Services Provider (as that term is defined in the policies of the Canadian Securities Exchange) accept responsibility for the adequacy or accuracy of this release).

Technical Disclaimer

The Company advises it is not basing any decision to produce on a feasibility study of reserves demonstrating the economic and technical viability of the project and also advises there is increased uncertainty and specific economic and technical risks of failure associated with any production decision.

Stewart A. Jackson, Ph.D., P.Geo., a “Qualified Person” within the meaning of National Instrument 43-101, has supervised the preparation of and approved the contents of this News Release.
