MONTHLY PROGRESS REPORT

Name of CSE Issuer: **St-Georges Eco-Mining Corp.**

Trading Symbol: SX

Number of Outstanding Listed Securities: 103,931,162

Date: **May 10, 2018**

1. Report on Business

St-Georges is developing new technologies to solve some of the most common environmental problems in the mining industry.

The Company controls directly or indirectly, through rights of first refusal, all of the active mineral tenures in Iceland. It also explores for nickel on the Julie Nickel Project & for industrial minerals on Quebec's North Shore and for lithium and rare metals in Northern Quebec and in the Abitibi region. Headquartered in Montreal, St-Georges' stock is listed on the CSE under the symbol SX, on the US OTC under the Symbol SXOOF and on the Frankfurt Stock Exchange under the symbol 85G1.

2. Other Corporate matters

Iceland Mineral Licenses (St-Georges Iceland Ltd)

Annual plans for multiple exploration campaigns and research & development initiatives have been provided to the Icelandic authorities. Updates will be disseminated by way of press release as soon as material information becomes available.

In April, Iceland Resources hired Efla Consulting Engineers EHF <http://www.efla-engineers.com/> as consultants in regards of the Icelandic projects. At the end of April, Efla did a series of drone flights over the Thormodsdalur (Thor) project with the purpose to take detailed landscape imagery with high resolution for use in 3D modeling and future environmental assessment work. Efla is expected to do more detailed flights on other tenements once snow clears in coming weeks.

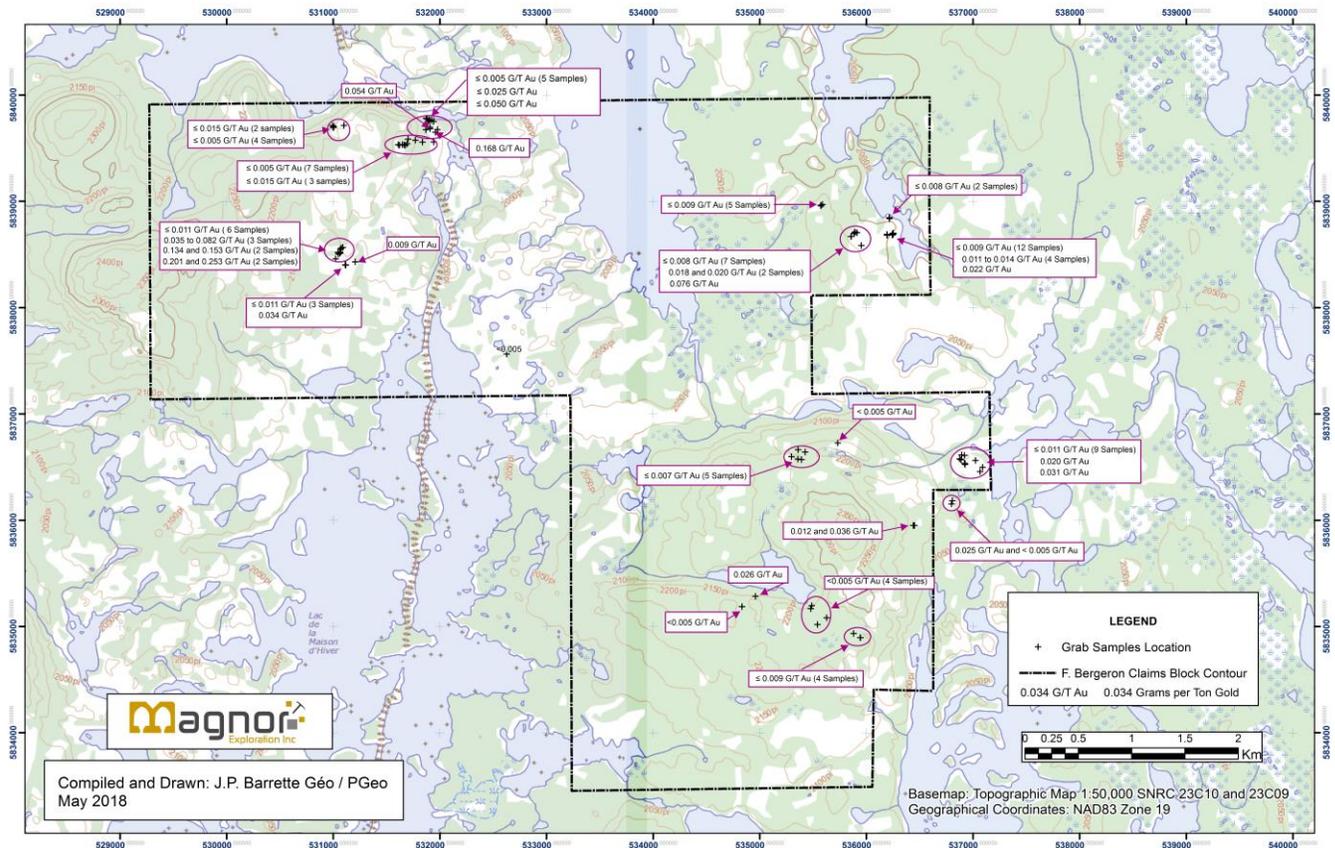

Kings of the North subsidiary

In March, Magnor Exploration, a Company that specializes in exploration campaign coordination and in project management, was hired to provide estimates and help with the permitting process for the Winter House Gold Project and the Isoukoustouc Nickel-Cobalt-Copper Project later this year.

Initial surface samples collected by the same company in the Fall of 2017 were sent to the lab and results used for initial evaluation. Gold indicators were found across the whole land package. Additional surface work will be required this summer prior to a potential drilling campaign in the fall. The project is found directly to the eastern boundaries of the “Courcy” gold project owned by Stelmine Inc. (TSX-V: STH)

Kings of the North estimates at \$1,600,000 the required budget for this year on the WinterHouse project.

Below is a map showing the zones covered by the exploration team.

Lithium Research Initiative

Third party mineral clays material has been received in Montréal and is currently being used to conduct additional testing. As previously mentioned in a press release dated December 27, 2017 St-Georges is in touch with exploration companies in order to receive material from multiple site in order to further its knowledge of its extraction process currently in development.

In early April, St-Georges was notified by Iconic Minerals, its partner in the development of the Lithium in Clay extraction process in Nevada, that they received the authorization, after regulatory review, to issue Iconic Minerals common shares to St-Georges as per the agreement between the two companies announced in a press release dated December 7, 2017

In early May the company's metallurgical team received additional test results from SGS Labs using some variation of the company's proprietary process. Lithium Clay from different sources was used. St-Georges metallurgists expect to be able to provide an update on the commercial viability of the process in the beginning of the 3rd quarter of 2018.

St-Georges Market Place

As previously disclosed in a press release dated January 4, 2018 and in previous monthly reports, St-Georges is progressing in the software development of its decentralized market place platform for commodities. The company plans to initiate later this year the early tests of the platform and of the blockchain tracking software that will allow vertical integration with it;

In April 2018, the company entered into a number of confidential Memorandum of Understanding (MOU) with third party interested in listing commodities on the SX Market Place. Governmental bodies in different jurisdictions have been approached to study the feasibility of deploying SX blockchain-based market place in their jurisdictions.

ZeU Crypto Networks Inc.

ZeU Crypto Networks is a wholly owned subsidiary of St-Georges. The subsidiary was created to host all core blockchain technology and smart contracts development and commercialization efforts.

On one of the initiative, St-Georges' management is actively working to deploy this technology in partnership with ZeU in the domain of mineral commodity tracking and trading. Significant software development efforts were conducted in the first quarter of 2018 in order to advance this platform that should allow mining and mineral related businesses to enroll later this year. All other applications for the ZeU/Tiande technology will be developed and deployed exclusively within ZeU following the final closing of the assets acquisition from Tiande.

On Jan 14, 2018, St-Georges announced that its subsidiary, ZeU Crypto Networks Inc. entered into a non-binding letter of intent to acquire all of the Blockchain and Smart Contract Technologies assets of Qingdao Tiande Technologies Inc., a Chinese private company.

On February 26, 2018, St-Georges announced that, further to its January 15 and February 8, 2018 (amendment to the LOI) press releases, its wholly owned subsidiary ZeU Crypto Networks Inc. signed a definitive asset purchase agreement dated February 23, 2018 with Qingdao Tiande Technologies Limited and Beijing Tiande Technologies Limited with the intervention of Guiyang Tiande Technologies Limited to purchase substantially all the intellectual property of the Vendors.

In April 2018, St-Georges moved forward with its financial advisor Gravititas Securities (See March 20th Press release) to identify financial partners and strategies for the coming year. As part of the process, Gravititas launched an independent due diligence process, part of which involved the review of the technology of ZeU, including visiting the laboratories of Tiande in Beijing. A due diligence report from Gravititas is expected before the end of May 2018. This report should allow St-Georges to overcome due diligence difficulties faced by many interested financing parties in recent months who lacked both the technical expertise necessary to independently review the technology (permission-based blockchain protocol with big data connectivity), as well as, the language expertise necessary to review legal and technical documentation.

Additionally, a procedural issue has been identified in which the issuance of a Title Opinion, confirming the Intellectual Property transfer from Tiande to ZeU upon closing of the transaction, is necessary prior to the completion of the due diligence. Management is working on a solution that will allow this issue to be resolved in a timely manner within the current month.

3. Summary of activities:

- New Contracts: None in April 2018.
- There were no contract terminations or financing cancellations in April 2018.
- Acquisition of asset: None in April 2018.
