

FORM 7

MONTHLY PROGRESS REPORT

Name of CSE Issuer: New Tech Lithium Corp. (the "Issuer").

Trading Symbol: NTM

Number of Outstanding Listed Securities: 45,917,569

Date: June 7, 2018

This Monthly Progress Report must be posted before the opening of trading on the fifth trading day of each month. This report is not intended to replace the Issuer's obligation to separately report material information forthwith upon the information becoming known to management or to post the forms required by the CSE Policies. If material information became known and was reported during the preceding month to which this report relates, this report should refer to the material information, the news release date and the posting date on the CSE.ca website.

This report is intended to keep investors and the market informed of the Issuer's ongoing business and management activities that occurred during the preceding month. Do not discuss goals or future plans unless they have crystallized to the point that they are "material information" as defined in the CSE Policies. The discussion in this report must be factual, balanced and non-promotional.

General Instructions

- (a) Prepare this Monthly Progress Report using the format set out below. The sequence of questions must not be altered nor should questions be omitted or left unanswered. The answers to the items must be in narrative form. State when the answer to any item is negative or not applicable to the Issuer. The title to each item must precede the answer.
- (b) The term "Issuer" includes the Issuer and any of its subsidiaries.
- (c) Terms used and not defined in this form are defined or interpreted in Policy 1 – Interpretation and General Provisions.

Report on Business

1. Provide a general overview and discussion of the development of the Issuer's business and operations over the previous month. Where the Issuer was inactive disclose this fact.

On May 2nd, 2018, the Company has signed a letter of intent (LOI) to acquire four federal prospecting permit applications covering 9,406 acres located adjacent to, and immediately south of, the Fredericktown lead-copper-nickel-cobalt subdistrict of the historic Old Lead Belt in Missouri. The Fredericktown subdistrict covers approximately 80 square miles in

the southeastern Old Lead Belt and consists of more than 30 historic mines, several of which were subsequently consolidated into larger mine complexes. Lands applied for encompass two Pb-Cu-Ni-Co past producers, one Cu-Co past producer and several cobalt prospecting sites.

New Tech Lithium's property applications all lie within a maximum distance of two miles from the current historic Fredericktown mining district boundary, and encompass lithostratigraphic and structural attributes deemed favourable for the discovery of new deposits. The area's cobalt prospectivity is further evidenced by a unique regional cluster of 15 small, historic Pb-Zn-Cu-Ni-Co and/or Cu-Co past producers, three of which are encompassed by lands under NTM application. On a large portion of the lands applied for, the discovery probability is considered to have a high potential for a Mine LaMotte equivalent deposit. The area is also thought to be underexplored due to extensive cover and historic focus on the very large Pb deposits discovered previously in the North Missouri geologic survey. Targets are analogous to the historic Fredericktown deposits and are projected to occur at depths from less than 150 feet to 600 feet.

The company has received a request from the U.S. Bureau of Land Management to submit an exploration plan acknowledging the receipt and preliminary adjudication of prospecting permit applications. The exploration plan is under development and will generally apply current SEMO Co-Ni-Cu deposit models using data from modern geophysical methodology and stream sediment geochemistry to facilitate targeting test drill holes. Approval of the exploration plan and the issuance of a prospecting permit is anticipated by Q4 2018.

In addition to the acquisition of a second cobalt project in the Old Lead Belt of SEMO and escalation of the cobalt exploration programs in general, the company continues to be actively involved in exploration for lithium, bromine and potassium at its Green River project in the Paradox basin of southeastern Utah and southwestern Colorado.

The scientific and technical data contained in this news release was prepared and reviewed by Kent Ausburn, PGeo, a non-independent qualified person to the company. Mr. Ausburn is responsible for ensuring that the geologic information provided in this news release is accurate and acts as a qualified person pursuant to National Instrument 43-101 - Standards of Disclosure for Mineral Projects.

On May 28th, 2018, the Company has signed an arm's-length definitive option agreement dated May 15, 2018, to lease the mineral rights for the Buena Vista Hills cobalt property located in Pershing county (Nevada), which contains known significant cobalt mineralization. New Tech Lithium had previously signed a letter of intent (LOI) with an arm's-length vendor to lease the mineral rights beneath a privately owned, approximately 640-acre section in Pershing county. Deal terms are defined later in this news release.

Cobalt geochemical results

Due diligence rock chip geochemical results for samples collected by New Tech Lithium from the top of the northeast margin of a historic iron ore open-pit mine on the property range from 0.048 per cent to 0.113 per cent cobalt and confirm previously reported rock chip sample cobalt data collected from around the existing open pit and historic drill data from a single, vertical, 580-foot reverse circulation (RC) exploration drill hole completed by the owners in 2008. The drill hole is located approximately 330 feet northeast of the northeast pit wall and contains a 40-foot interval with an average grade of 0.12 per cent CoO (cobalt oxide) occurring within a 60-foot interval of 0.1 per cent CoO and a 90-foot

interval of 0.09 per cent CoO. Complete NewTech Lithium due diligence as well as comparative historic rock chip and drill hole sample results are reported as follows.

Complete historic and recent cobalt geochemical results

New Tech Lithium due diligence geochemical results:

- Four rock chip samples from exposed mineralization at the top/upper bench of open pit and northeast development pit outside the pit ranged from 0.048 per cent to 0.113 per cent Co, with an average grade of 0.0723 per cent Co.
- This includes one sample from a small development pit located approximately 1,000 feet northeast of the main exposed mineralized zone of 0.048 per cent Co.
- There were two dump samples with an average grade of 0.013 per cent Co.
- There was one sample from development pit, approximately 800 feet southwest of the main exposed mineralized zone and outside the pit, grading 0.047 per cent Co.

Unpublished geochemical data:

- Fifteen pit wall (top of upper bench only) rock chip and dump samples ranged from 0.009 per cent to 1.2 per cent Co, with an average grade of 0.23 per cent Co.
- If the anomalously low (0.009 per cent Co) and high (1.2 per cent Co) cobalt concentration samples are cut from the sample population, the range becomes 0.023 per cent to 0.82 per cent Co, with an average grade of 0.18 per cent Co.

Historic RC drill hole data (drill hole located approximately 330 feet northeast of main exposed cobalt mineralized zone in the open pit):

- 20 feet to 110 feet at 0.09 per cent CoO;
- Including 20 feet to 80 feet at 0.10 per cent CoO;
- Including 40 feet to 80 feet at 0.12 per cent CoO;
- Please note that selected grab samples collected by New Tech Lithium and reported in the Ted DeMatties preprint paper are not necessarily representative of the deposit.

The final terms of the definitive option agreement are described in the attached tables (all dollar amounts are in U.S. dollars).

CASH AND SHARES

Item	Cash (\$)	Shares	Date
1	3,000	-	Paid on March 5, 2018
2	22,000	250,000	Closing date -- May 25, 2018 (10 business days after the execution date)
3	25,000	250,000	May 25, 2019
4	25,000	250,000	May 25, 2020

After the closing date, the number of shares to be issued will be subject to any subdivision or consolidation of the shares.

EXPLORATION EXPENDITURES (\$700,000)

Year 1 2019	\$100,000	Completed by the first anniversary of the execution date, May 15,
Year 2 2020	\$200,000	Completed by the second anniversary of the execution date, May 15,

Year 3 \$400,000 Completed by the third anniversary of the execution date, May 15, 2021

Royalty

The lessor retains a 1-per-cent net smelter returns royalty (one-half of which can be purchased for \$500,000). If magnetite and hematite are comingled within the ore or concentrates shipped from site, a royalty of \$1 per metric tonne of Fe (iron) shall be paid to the lessor in addition to the other royalties for the metals of interest.

There is a minimum annual royalty of \$50,000 to be paid for 10 years, commencing on the third anniversary of the execution date (which would be May 15, 2021).

There is an existing and underlying NSR of 5 per cent on the property owned by Nevada Lands and Resources of Reno, Nev.

Option to purchase

The company has the option to purchase the property for a price of \$2-million for a period of three years, expiring May 13, 2021.

Exploration program

New Tech Lithium plans to immediately initiate design of a phase 1 exploration program now that the option deal has been completed. The proposed phase 1 exploration program is expected to include early-stage test drilling around the known cobalt-mineralized zone(s), in and around the existing open pit and along presumed structural controls.

2. Provide a general overview and discussion of the activities of management.

None.

3. Describe and provide details of any new products or services developed or offered. For resource companies, provide details of new drilling, exploration or production programs and acquisitions of any new properties and attach any mineral or oil and gas or other reports required under Ontario securities law.

New Tech Lithium plans to immediately initiate design of a phase 1 exploration program now that the option deal has been completed. The proposed phase 1 exploration program is expected to include early-stage test drilling around the known cobalt-mineralized zone(s), in and around the existing open pit and along presumed structural controls.

4. Describe and provide details of any products or services that were discontinued. For resource companies, provide details of any drilling, exploration or production programs that have been amended or abandoned.

None.

5. Describe any new business relationships entered into between the Issuer, the Issuer's affiliates or third parties including contracts to supply products or services, joint venture agreements and licensing agreements etc. State whether the relationship is with a Related Person of the Issuer and provide details of the relationship.

None.

6. Describe the expiry or termination of any contracts or agreements between the Issuer, the Issuer's affiliates or third parties or cancellation of any financing arrangements that have been previously announced.

None.

7. Describe any acquisitions by the Issuer or dispositions of the Issuer's assets that occurred during the preceding month. Provide details of the nature of the assets acquired or disposed of and provide details of the consideration paid or payable together with a schedule of payments if applicable, and of any valuation. State how the consideration was determined and whether the acquisition was from or the disposition was to a Related Person of the Issuer and provide details of the relationship.
