Report on Business

1. Provide a general overview and discussion of the development of the Issuer's business and operations over the previous month. Where the Issuer was inactive disclose this fact.

The Issuer's has advanced its tailings remediation and precious metals recovery operations in Central America during the period.

The Issuer's business is environmental reclamation and precious metal recovery. The Issuer is pursuing business opportunities in Central and South America. As part of its business, the Issuer is applying innovative technologies to reprocess artisanal tailings to achieve soil remediation and metals extraction.

The Issuer is engaged in artisanal tailings remediation focused on Central America with expansion targets across Central and South America. The opportunities pursued by the Company arise from artisanal mine tailings and recycling in these regions.

While most tailings operations enjoy low operational costs, Newlox's approach benefits from higher grades characteristic of artisanal tailings due to the inefficiency of artisanal mineral processing techniques. In addition to precious metals recovery, the Company's processing technology is designed to remediate artisanal tailings and remove historical pollution.

During the period, the Issuer began to implement its plan to re-start gold production at Processing Plant 1 at its newly acquired nearby location adjacent to the Company's recently announced Boston Project (Plant 2). The new larger site allows for a future increase in the project scale. It also accommodates both the Company's enhanced laboratory and basecamp and is closer to the artisanal mines and sources of tailings feedstock.

The new location reduces transportation costs, enhances project logistics, facilitates production growth, and increases site security. Additionally, the new location is outside of the local municipal limits, reducing COVID-19 related concerns and enhancing the safety of personnel.

The re-assembled Plant 1 benefits from the robust infrastructure enjoyed at the previous location while adding significant advantages. It is accessible by municipally maintained roads, is connected to renewably sourced grid electricity, and is easily accessible for local emergency services.

During the period, Newlox announced the re-start of operations at Processing Plant 1 and that it would begin ramping-up operations. At full-scale operation, Plant 1 will be capable of processing 80 tonnes per day of material grading +9 grams per tonne gold with an anticipated gold recovery of approximately 90%.

2. Provide a general overview and discussion of the activities of management.

Management has been active during the period overseeing optimization and commercialization work being conducted at the Company's first artisanal tailings reclamation and reprocessing facility as well as evaluating expansion opportunities in Central and South America.

Key management personnel were deployed to the field during the period to oversee optimization activities underway at the Issuer's operations as well as the implementation of Newlox's plan to re-start precious metals production and environmental remediation at Processing Plant 1.
