

Sekur Private Data Ltd. Signs Distribution Agreement in Qatar

The agreement covers sales support for all the Gulf Cooperation Council countries as Sekur opens in other countries within the G.C.C.

TORONTO, Ontario, and NEW YORK – Nov. 29th, 2023 – [Sekur Private Data Ltd.](#) (CSE:SKUR) (OTCQB:SWISF) (FRA:GDT0) (“Sekur” or the “Company”), a leading Swiss hosted secure and private communications platform, is pleased to announce that it has signed a distribution agreement with a distributor in the State of Qatar (“Qatar”) in order to distribute its entire [Sekur](#) Swiss-hosted private and encrypted communications platform.

Sekur’s distribution agreement was signed with Beyond Limits Programs and Electronics. (“BLPE”), a Qatari corporation from Doha, Qatar, and is valid for a period of 12 months, with renewal options for additional 12 months. The agreement covers the State of Qatar and covers sales support and help for new distribution setups for all other Gulf Cooperation Council countries (“G.C.C.”). BLPE is the distributor who introduced Sekur to its distributor for Jordan and Iraq and is working with Sekur to setup other distributors and support companies for the United Arab Emirates and the Kingdom of Saudi Arabia, among other countries.

The Middle East has been subject to more and more cyber-attacks in the past 15 years due to its growing economic and political importance, and due to recent regional conflicts. One of the most famous attacks occurred on August 15th, 2012, where the computer network of Saudi Aramco was struck by a self-replicating virus that infected as many as 30,000 of its Windows-based machines. Despite its vast resources as Saudi Arabia's national oil and gas firm, Aramco, according to reports, took almost two weeks to recover from the damage, and in 2021 according to this [BBC News article](#), hackers demanded US\$50 million from Saudi Aramco over data leaked by one of its sub-contractors.

Alain Ghiai, CEO of Sekur Private Data, said: "We are thrilled to have signed this distribution agreement for Qatar and BLPE. Mr. Talal Hassoun, CEO of BLPE, has over 20 years of experience in enterprise software sales in the Middle East and has been instrumental in helping us close our deal in Jordan and Iraq, and now Qatar. We are looking forward to working together to expand into other G.C.C. countries and offer support to our future distributors in the region with the help of BLPE. The region is a hotbed of instability and cyber warfare is now part of that instability and is showing signs of increased activity, since the Israel-Hamas conflict broke out. Fortunately, we can offer the only Swiss-hosted, proprietary, private and secure communications platform that does not rely on big tech infrastructure, therefore reducing exponentially the risk of cyber penetration for businesses and governments in the region. From our discussions with BLPE, we believe that [SekurMessenger](#), [SekurMail](#) and [SekurVPN](#) for enterprises will be a success with governments, telecom operators and enterprises, such as energy, services and financial industry enterprises. Our prime directive is to provide private and secure communications for everyone, and as we are not connected to any Big Tech platform, we offer a truly independent, private and secure means of communications, without any data mining, through our proprietary technology and our secure servers based in Switzerland. We look forward to offering true private and secure communications to our new clients in the G.C.C. region, and to protect their intellectual property and privacy from data miners, malicious hackers and rogue state cyber-attacks."

[SekurVPN](#) uses a proprietary infrastructure and technology that deploys Swiss IPs only and does not data mine users’ web traffic and does not offer third party add-ons such as generic anti-virus and generic spam blockers. This independent, privacy and secure solution guarantees full privacy and high encryption of users’ connection. Sekur’s servers are all located in Switzerland only and

follow FADP, Swiss data privacy laws. FADP dictates that an individual's IP address is considered private property and cannot be sold or exploited.

On April 7, 2023, the Company launched SekurVPN, its privacy VPN solution available through [Sekur.com](https://sekur.com), and began commercial sales of its highly anticipated privacy and security VPN solution. The solution is also offered for sale in USD, CAD, NZD, AUD, SGD, CHF, EUR and GBP. Sekur plans to do a full scale launch before year-end 2023 with several videos on social media promoting SekurVPN to select targeted audiences in the U.S. Ghiai discusses the advantages of having a privacy VPN, and other preventive measures to minimize cyberattacks for consumers and businesses, on [Sekur Hack of the Week Episode](#), a nationwide TV show broadcast on Bloomberg TV, Fox Business and on streaming media.

SekurVPN is especially meant for privacy enthusiasts and users wanting to protect their identity from hackers. An example would be users going to their e-banking or shopping online, using their emails, using messaging applications and wanting to have full privacy and protection from hackers hijacking their IP location and signal. The service guarantees not to use Big Tech or hyperscalers for its functioning or hosting, and it guarantees that there are no third party bundles sold with it so no data is leaked or sold to third parties. It guarantees no traffic pulling or monitoring and no phone number is required to register to the service.

According to a [Forbes article](#), 66% of surveyed internet users within the U.S. use a VPN to help protect personal data, 80% use a VPN for increased security and 33% use a VPN to mask their internet activity. More statistics can be found on this [VPN Statistics And Trends In 2023](#) article.

Private:

[SekurVPN](#) uses its own proprietary infrastructure and does not use any hyperscaler or Big Tech hosting providers, unlike most other VPNs. SekurVPN offers Swiss IPs only. This guarantees that it is using only SekurVPN's own servers and routing. Other VPNs offer hundreds of locations and are using Big Tech providers, compromising users' privacy. SekurVPN never monitors users' activity and never shares any data with third party service providers. By being a pure VPN, without bundled outside services such as antivirus and ad blockers, SekurVPN keeps users' information private without sharing their data with third party service providers. With SekurVPN, users do not register their phone number on the app or the web, rendering users invisible from hackers or snoopers. No phone number to register, anonymous Swiss IPs only, no data mining or traffic sharing with anyone.

Secure:

SekurVPN's secure VPN routes all your internet traffic through SekurVPN's privately owned servers, in multiple locations in Switzerland only, using the highest encryption industry standards combined with its proprietary HeliX technology for added security. Encryption keys are not stored on devices and are unique at every connection. Users' passwords, confidential data and internet surfing stay encrypted even over public untrusted internet connections.

Easy to use:

SekurVPN is extremely easy to setup and deploy. There is no country list and our interface is simplified; just tap or click the connection button. SekurVPN's no-frills but highly secure and private service gives users peace of mind without thinking about geolocations.

Currently SekurVPN is available to use with MacOS, iOS and Android devices. Versions for Windows 64, Windows 32 and Linux are planned to be launched in the coming weeks.

In addition to [SekurVPN](#), the company offers a bundled Sekur plan, which includes [SekurMessenger](#) and [SekurMail](#) as a bundle of email, messaging and file transfer into one application, and includes the Company's latest SekurMail technology, which includes a proprietary anti-phishing and privacy feature called SekurSend®. SekurSend® lets a user send an email to any other recipient, whether they have [Sekur](#) or not, in full privacy and security as the email never leaves [Sekur](#)'s encrypted email servers based in Switzerland. The recipient can then click on the notification and reply in the same manner using SekurReply®, without the recipient having to register for a [Sekur](#) account. The sender can also decide to protect any email sent by adding a password to open it, a read-limit and a self-destruct timer as well. Sending an email with the SekurSend® feature allows the senders and recipients to add limitless size attachments to the emails without crowding the recipients' email box. This also eliminates BEC attacks for businesses and email phishing attacks. Additionally, SekurMail includes full control of email delivery, automatic data export for large enterprises and an automatic Data Loss Prevention technology ("DLP") with real time continuous archiving.

Recent data breaches in messaging applications have created a certain urgency for businesses and data privacy advocates to protect their communications from cyberattacks and identity theft via mobile and desktop devices.

[SekurMessenger](#) comes with a proprietary feature and technology called "Chat-By-Invite." This feature allows a [SekurMessenger](#) user ("SM user") to invite via email or SMS a non-SM user, or a group of non-SM users, to chat in a fully private and secure way without the recipient ever having to register to [SekurMessenger](#) or download the app. At the end of the chat, the initiator of the conversation can remotely terminate the conversation and all traces of the conversation are deleted from all users, including the recipient. This unique feature is now fully deployed and functional on all iOS and Android devices and web platforms. The target sectors are numerous, including but not limited to real estate, legal, finance, insurance, medical, government, energy, manufacturing, trade and pharmaceutical sectors.

[SekurMessenger](#) also eliminates many of the privacy and security risks by not requiring a phone number, which would divulge a user's phone device ID, but also by not social engineering a

user's phone or computer contact list and infecting the contacts by default as well, eliminating a huge loophole in security and privacy. [SekurMessenger](#) issues each user a username and a Sekur number. The Sekur number is the contact ID a user would disclose in order for other Sekur users to be added. The service comes with a self-destruct timer and other features as well, including Sekur's proprietary VirtualVaults and HeliX technologies with all data stored in Swiss hosted encrypted servers.

Sekur's Data privacy solutions are all hosted in Switzerland, protecting users' data from any outside data intrusion requests. In Switzerland, the right to privacy is guaranteed in article 13 of the Swiss Federal Constitution. The Federal Act on Data Protection ("FADP") of 19 June 1992 (in force since 1993) has set up a strict protection of privacy by prohibiting virtually any processing of personal data which is not expressly authorized by the data subjects. The protection is subject to the authority of the Federal Data Protection and Information Commissioner.

Under Swiss federal law, it is a crime to publish information based on leaked "secret official discussions." In 2010, the Federal Supreme Court of Switzerland found that IP addresses are personal information and that under Swiss privacy laws they may not be used to track internet usage without the knowledge of the individuals involved.

About Sekur Private Data Ltd.

Sekur Private Data Ltd. is a cybersecurity and Internet privacy provider of Swiss hosted solutions for secure and private communications. The Company distributes a suite of encrypted e-mails, secure messengers and secure communication tools. Sekur Private Data Ltd. sells its products through its own website, <https://www.sekur.com>, approved distributors and telecommunications companies worldwide. Sekur Private Data Ltd. serves consumers, businesses and governments worldwide.
