PRESS RELEASE: FOR IMMEDIATE RELEASE

**TARTISAN NICKEL CORP. ANNOUNCES GEOPHYSICAL SURVEY AT
THE KENBRIDGE NICKEL-COPPER-COBALT PROJECT, KENORA
MINING DISTRICT, ONTARIO TO ASSESS TARGETS**

Toronto, Canada, March 2, 2021 – Tartisan Nickel Corp. (CSE:TN; US-OTC:TTSRF; FSE:A2D) (“Tartisan”, or the “Company”) is pleased to provide an update on the 100% owned Kenbridge Nickel Project in Northwestern Ontario. The Company has contracted Crone Geophysics & Exploration Ltd to complete a surface Time Domain Electromagnetic (TDEM) survey over targets identified to the north of the known Kenbridge Ni-Cu-Co Deposit. The target areas are interpreted to represent similar rock types which host the Kenbridge Deposit. TDEM surveys have been used extensively and successfully to aid in identifying nickel sulphide targets like the Kenbridge Ni-Cu-Co Deposit.

The Company recently released an Updated Mineral Resource Estimate (MRE) for the Kenbridge Nickel-Copper-Cobalt Project, Atikwa Lake Area, Northwestern Ontario (press released September 17, 2020). Tartisan Nickel Corp. subsequently announced that P&E Mining Consultants Inc. have been contracted to oversee the updating of the Preliminary Economic Assessment Technical Report (“PEA”) on the Kenbridge Project (press released February 2, 2021). The “PEA” will identify the critical next steps that Tartisan needs to take to move the Kenbridge Deposit towards a Bankable Feasibility Study including permitting, geotechnical, environmental, and geological considerations.

Mark Appleby, CEO of Tartian Nickel Corp. states; “the geophysical field crew is expected to mobilize to site in the next 2 weeks. Tartisan is planning a late spring early summer drill program on the down plunge and down dip extensions to the known deposit and will look to drill targets generated from the TDEM program”. Appleby goes on to state “Tartisan will aggressively move the Kenbridge Nickel Project forward in 2021”.
