## Torino Power Solutions Selected by BC Hydro to Install Powerline Sensor

*Torino Power's Power Line Monitoring System (PLM) Provides Real-Time Temperature Data To Utilities*

Vancouver, British Columbia, January 8, 2019 - Torino Power Solutions Inc. (CSE: TPS) (the "Company" or "Torino") is pleased to announce that it has received a purchase order from BC Hydro for the installation of its Power Line Monitoring (PLM) sensor system in northern British Columbia.

Torino will deliver one of its overhead conductor sensor systems to a specified location in northern B.C. in February. The purchase order is for \$20,000 for one PLM unit that will be used for an evaluation installation. The Company will provide further installation details and timing in the coming weeks.

Rav Mlait, CEO of Torino commented, "The Torino PLM system is unique because of its completely passive sensors (no electronics or batteries) that provide utilities with the most durable, easy to install and low-maintenance sensor system in the market. We are truly excited to begin this new installation of our technology with a major utility in Canada. We are also pleased that BC Hydro selected a local company."

BC Hydro is a Crown corporation and Canada's fifth largest electric utility serving over 4 million customers in the province of British Columbia.

Torino's patented microwave cavity sensor technology delivers real-time temperature measurements of overhead powerlines that allow for increased transmission capacity, improved grid resiliency, lower energy costs and bottleneck elimination. Torino sensors can be deployed quickly and begin transmitting real-time data to the utility almost immediately.

Torino is focused on servicing utilities that are seeking new innovative sensor technology to improve grid performance and reduce cost for their customers.

#### Cautionary Statement Regarding Forward-Looking Statements

This press release contains forward-looking information that involves various risks and uncertainties regarding future events. Such forward-looking information can include without limitation statements based on current expectations involving a number of risks and uncertainties and are not guarantees of future performance of the Company, such as final development of a commercial product(s), successful trial or pilot of company technologies, no assurance that commercial sales of any kind actually materialize; no assurance the Company will have sufficient funds to complete product development. There are numerous risks and uncertainties that could cause actual results and the Company's plans and objectives to differ materially from those expressed in the forward-looking information, including: (i) adverse market conditions; (ii) risks regarding protection of proprietary technology; (iii) the ability of the Company to complete financings; (v) the ability of the Company to develop and market its future product; and (vi) risks regarding government regulation, managing and maintaining growth, the effect of adverse publicity, litigation, competition and other factors which may be identified from time to time in the Company's public announcements and filings. There is no assurance that the DTCR/PLM business will provide any benefit to the Company, and no assurance that any proposed new products will be built or proceed. There is no assurance that existing "patent pending" technologies licensed by the Company will receive patent status by regulatory authorities. The Company is not currently selling commercial DTCR/PLM systems. Actual results and future events could differ materially from those anticipated in such information. These and all subsequent written and oral forward-looking information are based on estimates and opinions of management on the dates they are made and are expressly qualified in their entirety by this notice. Except as required by law, the Company does not intend to update these forward-looking statements.
