UBIQUE MINERALS ANNOUNCES THE STRIKE PRICE FOR ITS SERIES A WARRANTS AND PROVIDES AN UPDATE ON ITS ZINC DRILLING PROGRAM AT DANIELS HARBOUR.

Toronto, Ontario, September 14, 2018 – Ubique Minerals Limited (CSE:UBQ) ("Ubique") announces that further to its common shares being listed on the Canadian Securities Exchange ("CSE") earlier this week, the strike price of its Series A Warrants has been established at 10 cents per unit.

Earlier this year Ubique raised \$237,500 through a non-brokered private placement, and during the next 10 days expects to raise up to an additional \$118,750 through the exercise of these associated Series A Warrants. In June Ubique issued a total of 1,770,000 Hard-Dollar Units ("HDU") and 605,000 Flow-Through Units ("FTU") each priced at \$0.10 per Unit. Each HDU comprised one share with an A and a B warrant.

The A warrant provides the right to buy one share for a period of 10 days from the date of the CSE listing of the Ubique shares, at a 20% discount from the CSE listing price, with a minimum price of \$0.10. The B warrant provides the right to buy one share for a period of 18 months from the date of the CSE listing of the Ubique shares, at a 20% discount from the CSE listing price, with a minimum price of \$0.10. Each FTU comprises one share with one-half A and one-half B warrants on the same terms as the HDU warrants. A total finder's fee of \$6,600 was paid and 66,000 finder's warrants were issued at an exercise price of \$0.10 per share, which are exercisable for a period of 18 months.

Ubique intends to use these proceeds, in part, to pay for an extension of the 2018 diamond drilling program on its Daniels Harbour Zinc Project on the island of Newfoundland, Canada.

Ubique owns 109 claims located in the Daniels Harbour area covering 27 sq kms, in two blocks. The Ubique claims cover three zones of zinc mineralization, namely P Zone, Cobo's Pond and Tilt Pond. The P Zone is where Ubique completed its 2017 drilling program, the highlight of which was a true width intersection of 13.6% Zinc over 12.2 metres including 17.43% Zinc over 8.6m. The first phase of the 2018 drilling program followed up on the 2017 diamond drilling results which discovered a zone of high grade zinc mineralization extending from the area where the workings of the former Daniels Harbour zinc mine were terminated. Of the ten drill holes completed in the first phase of drilling, five were targeted at extensions of the P-East Zone and all intersected zinc mineralization which has been sampled and submitted for assay. The drilling will be undertaken in more than one phase to allow analytical results from drill holes to guide subsequent drilling. The host rocks are soft limestones and dolostones which are drilled very rapidly. The reader should check the Ubique Minerals' website at www.ubiqueminerals.com for more information about the 2018 drilling.

The zinc mineralization intersected in the 2017 and 2018 drilling programs is a very pale coloured sphalerite characteristic of a low-iron Mississippi-Valley-Type carbonate rock geological environment, analogous to many large deposits in north America. Approximately 7,000,000 tonnes averaging 7.8% zinc

have been mined from the Daniels Harbour mine adjacent to Ubique's claims, and which was milled on site and shipped as a very high grade concentrate from nearby deep water port facilities to a custom zinc smelter. (Wardle, R.J. (2000) Mineral Commodities of Newfoundland and Labrador - Zinc and Lead; Government of Newfoundland and Labrador, Geological Survey, Mineral Commodities Series Number 1, 12 pages).
