

Uranium mineralization discovery in Namibia

Toronto, Ontario, June 13th, 2022 – Ubique Minerals Limited ("Ubique") (CSE:UBQ) is pleased to announce the first field report from Resource 500 V Ltd ("R500"), an Irish exploration company that holds 6 mineral exploration licenses and applications for 2 more licenses in Namibia, Africa. Ubique Minerals Ltd owns 25% of issued shares in R500.

The company has been delivered "REPORT ON RESOURCE 500 V Ltd LICENCES IN NAMIBIA AND WORKPLAN FOR EVALUATION" prepared for R500 by SRK consulting (UK) Ltd.

The report covers exploration license EPL7167 in Namibia and is dated 6th June 2022.

Draft from the executive summary.

License EPL7167 as of June 2022 is under renewal for a period of three years. The R500 main focus in the license area focused on three trends in the license area with anomalies in uranium and possibly massive sulfide base metal (massive sulfide) mineralization.

SRK consider sufficient information exists to undertake work on the ground and this should focus on the identified trends with surface geochemical sampling then drilling

The Erongo Licence EPL7167

Single license in the Erongo region to the east of Swakopmund. The license contains evidence of Damara aged granite pegmatite- and palaeochannel hosted uranium mineralization and possibly massive base metal sulfide mineralization in Proterozoic metamorphosed sediments and volcanics. The area has current and historic mines for all three including the world class Rossing mine to the immediate west (390 Mt grading 0.022% U₃O₈) and Husab mine to the south west (446Mt at 0.048% U₃O₈ in Zone 1 and an additional inferred resource of 102Mt at 0.054% U₃O₈ in Zone 2). In addition the operating palaeochannel hosted uranium mine at Langer Heinrich is to the immediate south (71 Mt @ 0.06% U₃O₈).

Geochemical survey

Minimal geochemical surveys have been completed to date over EPL7167. The results of two grab samples collected by SRK provided confirmation of uranium anomalies (Table 2-3).

Table 2-3: Portable XRF analysis of two 5 kg channel samples collected February 2022 (all concentrations in ppm) Element

Element	U	Th	Cu	Pb	Zn	Fe	Mn	W
Alaskiite	558	28.9	22.4	12.3	<1	129	107	12.3
Calcrete	117	3.2	8.7	9.9	<1	545	1340	6.5

The combined results of the remote sensing and geochemical surveys to date suggest that there are two types of uranium mineralization present on the EPL:

- Rossing style alaskiite hosted uranium
- Calcrete or palaeochannel hosted uranium

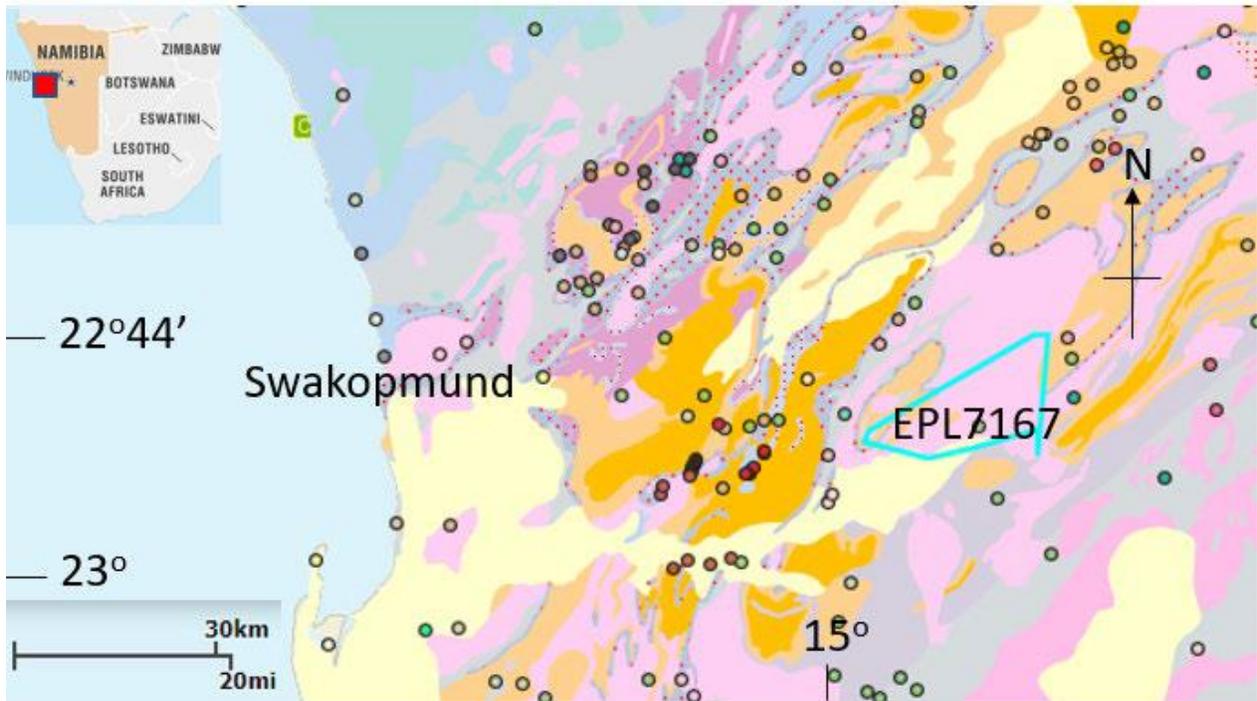

Figure 1 Location of EPL7167 and Base Geological map

Vilhjalmur Thor Vilhjalmsson CEO commented *“The initial results are very encouraging, and the company is working closely with the management team at R500 to decide on the next steps of the exploration and looking forward extend the work on the license this year.”*

On behalf of the board directors

“Vilhjalmur Thor Vilhjalmsson”

Vilhjalmur Thor Vilhjalmsson. CEO

About Ubique Minerals Limited

Ubique Minerals Limited is an exploration company listed on the CSE (CSE:UBQ) focused on exploration of its Daniel’s Harbour zinc property in Newfoundland and is actively looking at other projects around the world. Ubique became a publicly listed company in September 2018. Ubique

has an experienced management group with a record of multiple discoveries of deposits worldwide and owns an extensive and exclusive database of historic exploration results from the Daniel's Harbour area.

For more information on Ubiq please contact see www.ubiqueminerals.com or contact vilhjalmur@jvcapital.co.uk

Dr. Gerald Harper, P.Geol.(NL), director of Ubiq, is the qualified person as defined by NI 43-101 responsible for the technical data presented herein and has reviewed and approved this release.
