Report on Business

1. Provide a general overview and discussion of the development of the Issuer's business and operations over the previous month. Where the Issuer was inactive disclose this fact.

While Exro is continuing development of its Dynamic Power Management technology ("DPM") for motor applications, recent work has also shown that Exro's coil switching technology improves engine torque at low speeds. Consequently, to support its partnership with Potencia, the Company is focusing more of its efforts on improving torque/speed performance of electrical motors.

The Company is also utilizing artificial intelligence to develop new battery management ("BMS") software technology, which it is calling the "intelligent battery management system" ("IEMS"), which should provide an improvement over existing BMS applications. Exro expects that the new IEMS being developed, when fully commercialized, will allow for constant monitoring and manipulation of energy inflows and outflows, at rates of up to 100k manipulations per second. The goal is total control of the flow of energy, in effect allowing better, more balanced storage of energy, especially under changing conditions, while also making battery banks of any size inherently electrically safe.

The Company is also continuing to explore other potential collaborations.

2. Provide a general overview and discussion of the activities of management.

The Company continues to progress development of its BMS and Dynamic Power Management Technology (DPM) technologies for its strategic partners. Management recently announced that further work has now been completed on the Company's DPM, moving the technology from proof of concept to definitive product offerings. As well, the architectural design of the Company's Intelligent Energy Management System (IEMS) has been completed, addressing the important relationship between the electric motor and the lithium ion battery.

An initial order has been received from Potencia Industrial for Motor Driver (MD) controllers and Exro will begin initial validation and testing at Potencia's facilities in Mexico City. Exro expects delivery of the first MD units in the fourth quarter of 2019.
