17. *Market, Political and Regulatory Trends Affecting Glenbriar*

The business technology market is shifting from the traditional on-premises client-server model to incorporate structural changes in how employees and customers use new technology and communications. These changes reflect 4 main pillars:

- a) **Big Data** represents the rapid expansion of the number of devices connected to the Internet and providing explosive growth in both the amount and type of data that can be collected, analyzed, and used to drive new sources of revenue and efficiency for businesses.

- b) **The Cloud** represents the movement of processing capacity away from desktops to centralized servers, which can be public, private or hybrid.
- c) **Mobility** represents the shift in end user devices to smartphones, tablets, notebooks and other devices accessing the Cloud on a wide variety of operating systems. This pillar incorporates the trends of consumerization of data consumption and BYOD (bring your own device).
- d) **Security** reflects the need for enhanced security requirements resulting from device and data proliferation and accessibility inherent in Mobility, Big Data and the Cloud, which has driven an exponential increase in cybercrime, with the consequent loss of privacy, theft and misuse of identity and intellectual property.

All of these have to be made to work together in new and exciting ways in order to get both the functionality and security that are needed as a result of these changes. Glenbriar's solutions lead business into this new world.
