Report on Business

1. Provide a general overview and discussion of the development of the Issuer's business and operations over the previous month. Where the Issuer was inactive disclose this fact.

The Company is engaged in artisanal tailings remediation and gold trading focused on Nicaragua, Costa Rica, and Ecuador. The opportunities for production and trading arise from artisan mine tailings, recycling, private sellers, and internal production in these regions. In collaboration with the Norman B. Keevil Institute of Mining Engineering at the University of British Columbia, the Company has implemented effective, innovative, and environmentally responsible processing and reclamation technologies.

Following a financing in late November of 2014, Newlox embarked on an expansion program at the Company's first processing centre which, when completed, will increase throughput capability from 40 tonnes per day to 80 tonnes per day, effectively doubling gold concentration production.

Newlox's operational team made good progress on the expansion during January, making major upgrades to the concentration and flotation equipment as well as the supporting infrastructure. Final installation and commissioning activities were underway in late January.

Processing systems continued limited operation at the Company's initial processing plant during the expansion process. Gravity and flotation concentration systems continued to prove effective in producing concentrate. The company currently has nearly 5 tonnes of concentrate inventoried.

Newlox has also begun the construction of a wholly owned beneficiation facility which will convert concentrates produced by the Company into gold doré for sale. The facility is located at a new site which will facilitate the easy transportation of concentrates from the company's current and future concentrate plants in Central America.

The Company has identified, with the help of UBC, an intensive beneficiation process which will reach high levels of efficiency while reducing costs and complexity when compared to traditional techniques. In addition, the process is designed to be highly environmentally responsible with the recycling or destruction of reagents to produce only clean effluent.

The intensive process being implemented by Newlox will allow for a small plant to “punch above its weight class” providing sufficient capacity while keeping capital and operating costs low.

Installation and construction activities have progressed according to plan at the beneficiation facility during January with a Q1 startup still targeted.

On January 23, the Company announced that it has clarified its previous disclosures and retracted any statements which imply a mineral resource or reserve as no resource information compliant with National Policy 43-101 has been prepared.

Management wishes to stress that Newlox is not a mining company and does not intend to conduct mineral exploration, orebody definition, or mining. Newlox is a precious metals trading and environmental reclamation company.

2. Provide a general overview and discussion of the activities of management.

Management has been applying modern processing technologies to existing tailings stockpiles in Latin America to achieve environmental reclamation and precious metals recovery.
