The uranium spot price was quoted as US\$36.50 per pound at the end of September, with long-term supply contracts approximately \$10 higher. Russia reported that it plans to almost double its production of uranium in the next five years. Cameco is expanding its production at Cigar Lake. The World Nuclear Association predicts that global nuclear power capacity may grow more than 45% in the next 20 years, which will require a new pipeline of uranium production within ten years.

Bruce Power reported that 55 nuclear reactors in the Canada/US Great Lakes area is producing 30% of the region's electricity and avoids 250 million tonnes of CO₂ emissions.

The market for REEs continues to be fragmented and unstable. Molycorp Inc., a large US REE producer is operating under bankruptcy protection.

Appia's mineral resources at Elliot Lake, Ontario are among the world's largest, with a combined uranium and REEs content proven to be recoverable using a flotation process and subsequent recovery treatments. Further recovery testing is projected to increase the recoverable percentage of contained REEs.
