*The BacTech bioleaching technology can be applied to the remediation of polluted mine waste in an economically beneficial manner. The BacTech bioleaching technology has been used commercially in the past for the liberation of precious and base metals from difficult to treat mine concentrates and ores.*

*The business plan for BacTech Environmental Corporation is to apply the BacTech bioleaching technology to abatement projects to remove harmful elements such as arsenic and sulphur from the environment, where this can be assisted by a positive cash flow from metal recovery. Metals which could be extracted include gold, silver, cobalt, nickel, copper, uranium and zinc.*

2. Provide a general overview and discussion of the activities of management.

*On August 27, the Company released the results of a Preliminary Economic Assessment (PEA) prepared by Micon International Limited (Micon) on the Company's Snow Lake project in Manitoba. The study shows an economic project that is highly leveraged to the price of gold. Using the 3 year average price of \$1,390/oz of gold provides a modest return. Current prices illustrate a much more robust return using NPV, IRR and cash flow as benchmarks.*

*The Company also announced intentions to raise up to \$1,650,000 by way of a private placement of common share units. BacTech will issue up to 11,000,000 units at \$0.15 per unit. Each unit will consist of one common share and one common share purchase warrant. Each warrant will entitle the holder to purchase one common share at a price of \$0.17 for a period of 360 days from the first anniversary of the date of issue. The common shares and warrants will be subject to a four month hold period.*

*On August 1, the Company announced the assay results of the composite sample taken in May of this year from stored samples from the former mill of Telamayu in Bolivia. The Telamayu tailing site is 1 of 26 sites identified by the Bolivian government for remediation, and the Bolivian government advised the Company it is the only one, to date, to have had a systematic sampling program. The samples returned silver values of 9 oz/t and copper assayed 1.7%. BacTech will now begin negotiations with COMIBOL, the state mining company, to determine if there is potential for BacTech in the remediation.*

*The Company continues to receive and evaluate other expressions of interest and potential projects from many different countries and Companies.*
