NEWS RELEASE

For Immediate Release

GoldTrain Stakes Additional Claims with “Paleo-placer” Gold Potential.

TORONTO, August 11, 2010 – GoldTrain Resources Inc. (CNSX: GT) (“GoldTrain”) is pleased to announce that it has staked additional claims to add to its 100%-owned Clement Township and 75%-owned Janes Township property positions. Both of these townships are located northeast of Sudbury, Ontario.

The area in and around the Clement and Janes properties is the subject of an extensive exploration program being carried out by Ginguro Explorations Inc. (TSXV: GEG). Ginguro has reportedly discovered an extensive gold-bearing system which it believes is geologically similar to the world famous Witwatersrand Basin in South Africa. The Witwatersrand is renowned for being the source of over one third of all of the gold ever mined on earth.

Clement Township Property.

GoldTrain has added four (4) new claim blocks totaling 60 claim units on the northern boundary of its Clement property. A recent helicopter VTEM Survey completed for GoldTrain has identified several high-priority EM and magnetic anomalies on the original property which will help target further exploration on the expanded property.

GoldTrain's property position now consists of over 3,600 hectares or 14 square miles and has recently been surrounded on three sides by Ginguro. (See attached map.)

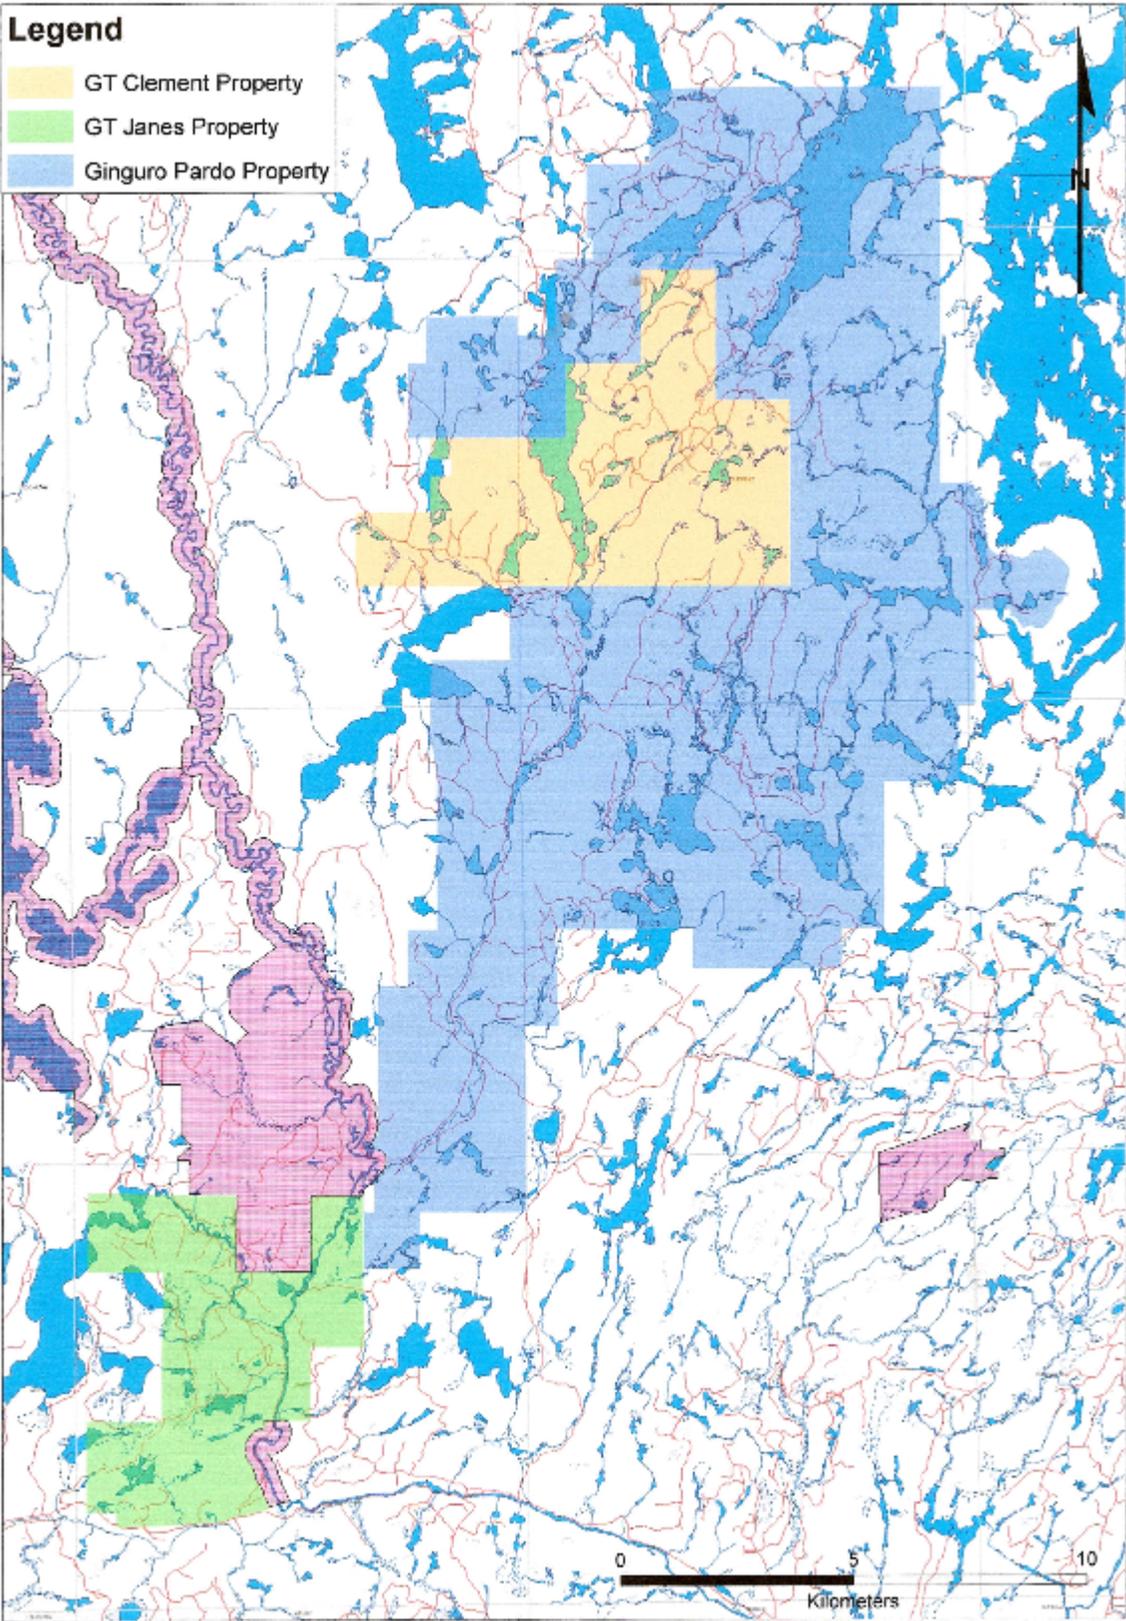

Janes Township Property

GoldTrain has added five (5) new claim blocks (70 claim units) on the southern boundary of its Janes property. GoldTrain's Janes property position is located at the southeast end of Ginguro's property. Ontario Government geological maps indicate that favourable metasedimentary host rocks of the Mississagi Formation, part of the Huronian Supergroup, outcrop on the property.

GoldTrain's property position in Janes Township now consists of over 3,200 hectares or 12.5 square miles. (See attached map.)
