Report on Business

1. Provide a general overview and discussion of the development of the Issuer's business and operations over the previous month. Where the Issuer was inactive disclose this fact.

The issuer concluded a Plan of Arrangement Agreement dated June 24, 2013, was approved by shareholders at the annual and special meeting held July 30, 2013 and subsequently approved by the Supreme Court of British Columbia August 6, 2013. As a result of the Arrangement, Newlox shareholders will hold, on a pro rata basis, a total of approximately 2,000,000 shares of MN Ventures Ltd., 2,000,000 shares of Carnelian Strategic Capital Corp. and 900,000 shares of Sor Baroot Resources Corp.

2. Provide a general overview and discussion of the activities of management.

During the month management filed the work assessment report with the BC Mining and Minerals Division for the work completed in April for \$ 14,824.89. The AGM and Special meeting of shareholders was held and all proxy matters were approved.

3. Describe and provide details of any new products or services developed or offered. For resource companies, provide details of new drilling, exploration or production programs and acquisitions of any new properties and attach any mineral or oil and gas or other reports required under Ontario securities law.

The Assessment report filed with the BC Minerals Branch in July is attached.

A short soil geochemical reconnaissance survey was conducted from April 10th to April 16th where 284 samples were collected and analyzed. The purpose of this survey was to further define a gold in soil anomaly identified by Amarc in 2006. The survey extended the previous soil geochemical grid 800m south at a line spacing of 100m. Samples were collected from the new zone at 50m sample spacing. Samples were collected from shallow depths, approximately one pound in weight and placed in Kraft sample bags for analysis.

Samples were submitted to Acme Analytical Laboratories in Vancouver for 15g Aqua Regia Digestion - 36 Element ICP-MS analysis.

The magnitude of the anomalous values appears to decrease with distance away from the centre of the anomaly suggesting a weakening of the dispersal train. Values as high as 727.3ppb and 651.5ppb Au were reported at 650250mE, 5683000mN in previous sampling by Amarc and are found as a result of the recent extended sampling to decrease to 192.4ppb Au over 2.5km to the south-southeast. Directionality and trend of the gold in soil anomaly is consistent with the glacial direction of north-northwest/south-southeast (Bednarski, 2007).

Coincident geochemical anomalies can be seen in Ag, and to a lesser extent As, Cu, and Pb. Although the number of anomalous values returned for As, Cu, and Pb are limited, they are coincident with the Scot Creek gold in soil anomaly and adjacent IP and Resistivity anomalies defined by Amarc in 2006.

Recommendations are included for a follow-up program of grid extension, trenching and an induced polarization survey. A reconnaissance drilling program is also recommended to investigate in-situ mineralization of the anomalies discovered to date and any new anomalies discovered in the extended grid area.

4. Describe and provide details of any products or services that were discontinued. For resource companies, provide details of any drilling, exploration or production programs that have been amended or abandoned.
