

## **Mobile Integrated Systems & Quantitative Alpha Trading Are Pleased to Announce the Release of Securities Signal and Trading Software Stealth Analytics© in both .NET and Java**

*It is the First Software that Offers Traders Insight into Possible Immediate Future Price Changes of Individual Securities Based on Moment-to-moment Sentiment of all Traders in the Market*

TORONTO, September 24, 2012 /PRNewswire/ -- Mobile Integrated Systems, Inc. ("MIBI") and Quantitative Alpha Trading, Inc. ("QAT," and together with MIBI, the "Parties," and each a "Party") announced the completion of development of commercially ready .NET and Java-based Stealth Analytics© (the "Software"). The .NET and Java based software were developed and released under the commercialization agreement signed between QAT and MIBI in August 2012.

Stealth Analytics© software extracts and displays the collective moment-to-moment sentiment of all traders in the market, the first in the market to do so. It displays that sentiment's movement or change for individual securities and indicates possible immediate future price changes. The software provides real-time, in-depth analysis of underlying forces that are currently influencing the market. The Stealth Analytics© software platform uniquely presents all of its information using gauges to make it easier, faster and more effective for you to make trading decisions.

"We are pleased to release the first fruit of our commercialization agreement. This release is the first in a family of financial software focused on electronic trading signals, robotic trading and algorithmic execution platforms that will form a cornerstone of our expansion strategy," said Murray Simser, President and CEO of MIBI. He added, "I am delighted that we were able to rapidly generate the first products. This proves the value of the Commercialization Agreement and shows that revenue is the most important goal of these agreements."

"MIBI moved quickly to develop and release products. This launch proves that we chose the right partner," said Jim McGovern, Chief Executive Officer of QAT. He added, "our relationship with MIBI enabled us to develop and commercialize our products much sooner than we could have alone and prior to the closing of the Transaction anticipated to be later this year."

### **About Quantitative Alpha Trading, Inc.**

For more than a decade, QAT, an Ontario corporation, has been researching, developing and maintaining proprietary algorithmic securities trading systems that operate across numerous financial markets. Relying on behavioural science patterns, the Company's proprietary systems use a linked series of computer programs to analyze securities market data in real-time and directly execute buy or sell orders over the electronic securities exchanges while monitoring the status of every trade within a given portfolio without human intervention. The Company trades on CNSX under the symbol QAT and in the United States on the OTCQB under the symbol QATSF. <http://www.qatinc.com/>

**About Mobile Integrated Systems, Inc.**

MIBI, a Nevada corporation, is a technology company focused on developing and deploying mobile products and transaction systems to a variety of industry sectors including lotteries, gaming, transportation, telecommunications, finance, and others. The company trades on the OTCUS under the symbol MIBI. More information can be found at: <http://mobileintegratedsystems.com/>
