MONTHLY PROGRESS REPORT

Name of CNSX Issuer: St-Georges Platinum and Base Metals Ltd

Trading Symbol: SX

Number of Outstanding Listed Securities: 101,862,074

Date: October 6, 2011

Report on Business

1. St-Georges Platinum positions itself as a junior Nickel, Copper, Iron Ore, Platinum, Palladium, Rhodium, and Cobalt explorer with projects in Quebec, Canada.

It jointly owns with Litewave Corp. the Villebon Property in Abitibi, Quebec. The Company also owns eight North Shore Properties that constitute the Manicouagan Constellation under a 50% option attributed to Litewave Corp and 100% of the Isoukoustouc group of properties on Quebec's North-Shore near the deep sea port town of Baie-Comeau. The Company acquired in 2010 three new claims adjacent to the Villebon Property on its north eastern border and the Cooper Lake property (owned 100%) to the south east of Villebon.

Platinum and PGE's Target Compilation Report on the Quebec North Shore was commissioned in Fall 2010 with Exterra PTY, a South African Geological firm specialised in Platinum Group Metals and the report should be received by year end.

The Company has started three exploration campaigns in the first quarter of 2011 on Villebon, Isoukoustouc and Julie projects. 6,075 km of airborne geophysical lines now completed and compiled on the later 2 projects.

Drilling on Julie and Isoukoustouc will start this fall right after the completion of a large scale mapping campaign scheduled to be completed this month. Permits required for the drilling have already been requested earlier this month of October. Limited surface work and portable drills are currently used on Isoukoustouc to confirm the discovery of several new showings.

Metallurgy

The Company has collected surface and blast samples from the Julie and Isoukustouc properties. Results from these samples were published in a press release by the Company on October 5th.

2. Other Corporate matters:

None

3. Summary of activities on the properties:

Villebon Property

The first phase of drilling was completed in August 2011 providing for 2,210 meters of core. The hole cores are logged and all samples were sent to the ALS-Chemex Lab for analyses. Assay results are coming in and we expect full reception at the end of October 2011.

Manicouagan Constellation Group of Properties

Litewave Corp, who had an option to acquire 50% of the constellation properties failed to deliver on its obligations pursuant to the option agreement and was notified of its default by St-Georges. As a result of that default from Litewave, the Constellation properties option agreement is now considered void by both parties. St-Georges own 100% of these properties and are negotiating with Litewave and other parties to find partners willing to develop these properties.

The Manicouagan Constellation potential will also be evaluated and targets will be identified within the Regional PGEs Report commissioned by St-Georges Platinum from a South African geological firm specialised in Platinum Metals.

Isoukustouc Property

Exploration work has continued and involves preliminary mapping along with the logging of roads and sampling of mineralized rocks. We have completed planning for the drilling campaign which consists of 8,800 m of core distributed in 40 targets amongst already identified showings. It is expected that the new drill sites will be ready for the drilling crew to proceed in early November 2011.

- No new contracts with related parties need to be disclosed in September 2011.
- There were no contract terminations or financing cancellations in September 2011.
- Acquisition of asset in September 2011: no material change.
