

## **QUADRON CANNATECH SECURES ADDITIONAL SALE OF THE "BOSS" CO2 EXTRACTION SYSTEM**

Vancouver, British Columbia, December 21, 2017 – Quadron Cannatech Corporation (the "Company" or "Quadron") – (CSE: QCC), is pleased to announce that it has completed another sale of the BOSS CO2 Extraction System ("BOSS") to an authorized cannabis industry participant located in the Fraser Valley, British Columbia.

"Over the extensive development phase of the next generation CO2 Extraction System – the "BOSS", our team of engineers engaged with a broad base of industry participants and listened to their needs to better understand the task at hand. The results are simply amazing – visitors lined up at our booth to talk with our representatives at the recent MJBiz Conference in Vegas where we showcased the BOSS," stated Rosy Mondin, CEO & President of Quadron. "There is an immediate need for innovation, automation, analytics, and predictable recoveries in cannabis extraction. The BOSS is a revolutionary system that will no doubt disrupt the industry and build a new, worldwide benchmark for extraction technology, and industry standards moving forward."

Quadron is ramping up production of its BOSS CO2 Extraction Systems in anticipation of completing additional orders as interested buyers conclude their investigation and analysis of available CO2 extraction systems on the market. Sales of the BOSS is expected to be a significant revenue growth driver for Quadron in 2018 and beyond.

The BOSS CO2 Extraction System combines proprietary max flow technology with advanced thermodynamics, automated features and an exclusive plug and play design. The BOSS has a very small footprint, requiring only a fraction of the space and energy requirements compared to other systems on the market. Installation is simple – no external hardware or facility renovations required. All that is needed are two electrical outlets and an hour to set-up.

### **THE BOSS EXTRACTION SYSTEM ADVANTAGES**

- Automated system with remote monitoring and control features
- Software collects, stores, and analyzes data for Research & Development
- Programmable cycles - maximizing extraction and separation efficiency
- Plug and Play self-contained system with no external setup required
- Simplified assembly with only two pieces of equipment to set-up, two plugs and four hoses to connect
- Integrated heat exchanger with proprietary advanced thermodynamics
- High precision operating parameters for accurate performance
- Ability to collect extract during runtime
