

PRESS RELEASE

RENFORTH RESOURCES INC.

65 Front Street East, Suite 304, Toronto, Ontario, M5E 1B5

RENFORTH COMMENCES DRILLING AND ENCOUNTERS VISIBLE GOLD IN FIRST TWO HOLES

Toronto – January 19, 2015 – Renforth Resources Inc. (CSE: RFR) (“Renforth” or the “Company”) is pleased to announce our first 2015 drill campaign has commenced with the first two holes each encountering three instances of visible gold. In the first hole, REN15-24 visible gold occurred at depths of 15, 15.7 and 15.8 metres down hole. In the second hole drilled, REN15-25, visible gold was observed at 59.2, 70 and 70.1 metres down the hole. Brian H. Newton P Geo will prepare and submit this core for assay; results will be released when available.

Renforth has begun a shallow 4 hole drill program using the proceeds of the \$80,000 financing closed in December 2014. As depicted in the long section image below there are near surface gaps, caused by a lack of drillholes, in the current resource model. This program is targeting several of those gaps as depicted with the traces of planned drillholes, and a backup potential drillhole, in the long section map below.

"We could not be happier than to commence our 2015 exploration season with visible gold in our first two holes. We are pleased with this initial success as it implies a positive impact on our resource since we are near surface and outside of the existing resource model" states Nicole Brewster, President and CEO of Renforth.

Visible Gold Grains at a depth of 15.8m in drillhole #REN15-24

Thompson-Cadillac Mine Area Resource Long section with planned holes in red trace
