

PRESS RELEASE

Nixon-Bartleman Acquisition

Toronto – April 26, 2016 – Renforth Resources Inc. (CSE: RFR) (“Renforth” or the “Company”) Renforth is pleased to announce the acquisition of 100% of the Nixon-Bartleman project, where an initial field campaign by Renforth found 22.1 g/t Au in a 0.3m channel sample, part of a larger channel of 0.6m which returned 13 g/t Au in assay located outside of the historic area of interest on the property. (please refer to press release of Sept. 10, 2014).

The Nixon-Bartleman property, comprised of four patents and fifteen claims, covering an area of 313Ha, is located 45 km southwest of Timmins, Ontario, straddling the Porcupine-Destor Deformation Zone (“PDDZ”), the key structural control for gold mineralization in the area. Past production from the PDDZ in the Timmins and Porcupine District gold camps has exceeded 60 million ounces with current active mines including Dome, Hoyle Pond and Timmins West, the latter only 25 km east of Nixon-Bartleman.

The property has several areas of future focus. The surface gold-bearing Nixon-Bartleman showing which, at the “Main” showing, has been sampled over a total length of 450m, has also been intersected by prior operators with drillholes. Elevated gold values were encountered in “historic” (2004) drilling by a previous operator, including as high as 39.8g/t over 1m, this structure is open on strike and at depth. The Main showing is similar in mineralization, associated trace elements, alteration and structural style to known gold deposits of the Porcupine camp. Anomalous gold values were also picked up in other sparsely-drilled parts of the property, which may represent parallel mineralized zones.

In addition there is a second gold occurrence associated with a silica zone at the contact between a feldspar porphyry intrusive and the volcanic stratigraphy was discovered during a 2004/5 drill program by a prior operator, which appears to strike for at least 480m. This occurrence has only seen cursory exploration to date.

Lastly, but worthy of note, several geophysical and geochemical anomalies were historically delineated but have not yet been tested.

Renforth has negotiated a 100% purchase of this property, subject to a pre-existing 2% NSR, for total consideration of 3 million shares of Renforth and the issuance of

an additional 0.5% NSR to the vendor. This purchase replaces the prior option held on the property and is subject to Board and regulatory approval as required.

The technical information in this press release has been reviewed and approved by Brian H. Newton, a “qualified person” pursuant to the guidelines set out in National Instrument 43-101.

ABOUT RENFORTH

Renforth Resources Inc. is a Toronto-based gold exploration company with interests in two of Canada’s gold exploration camps. In the Cadillac-Malartic Gold Camp the Company holds the New Alger project, with an inferred resource of 237,000 ounces of gold above a depth of 200 metres contained in 3,505,000 tonnes with a grade of 2.1g/t Au using a cut-off of 0.75 g/t Au (see press release July 17, 2014) as calculated by Brian H. Newton P.Geol and Philip Burt P.Geol, which is located on the Cadillac Break outside of Cadillac, Quebec and an option to purchase 100% of the Parbec Property from Globex Mining Enterprises Inc. (GMX-TSE), a historically identified gold occurrence with more than 100 drillholes completed and a ramp into the mineralization in place located outside of Malartic, Quebec, contiguous to the Canadian Malartic open pit mine. In Ontario the Company has the right to earn a 55% interest in the Nixon-Bartleman project, located on the Porcupine-Destor fault in the West Timmins Mining area, another historic gold occurrence with a couple of old shallow pits onsite and a history of past drilling which has not yet defined the gold occurrence.

Forward Looking Statements

This news release contains forward-looking statements and information under applicable securities laws. All statements, other than statements of historical fact, are forward looking. Forward-looking statements are frequently identified by such words as ‘may’, ‘will’, ‘plan’, ‘expect’, ‘believe’, ‘anticipate’, ‘estimate’, ‘intend’ and similar words referring to future events and results. Such statements and information are based on the current opinions and expectations of management. All forward-looking information is inherently uncertain and subject to a variety of assumptions, risks and uncertainties, including the speculative nature of mineral exploration and development, fluctuating commodity prices, the risks of obtaining necessary approvals, licenses and permits and the availability of financing, as described in more detail in the Company’s securities filings available at www.sedar.com. Actual events or results may differ materially from those projected in the forward-looking statements and the reader is cautioned against placing undue reliance thereon. Forward-looking information speaks only as of the date on which it is provided and the Company assumes no obligation to revise or update these forward-looking statements except as required by applicable law.
