

RENFORTH RESOURCES INC.

MANAGEMENT DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS FOR THE YEAR ENDED DECEMBER 31, 2017

The following is a discussion and analysis of the activities, results of operations and financial condition of Renforth Resources Inc. (“Renforth” or the “Company”) for the year ended December 31, 2017 and the comparable year ended December 31, 2016. The discussion should be read in conjunction with the audited financial statements for the years ended December 31, 2017 and December 31, 2016 and related notes thereto. The Company’s financial statements have been prepared in accordance with International Financial Reporting Standards (“IFRS”). All monetary amounts are reported in Canadian dollars unless otherwise noted. These documents, as well as additional information on the Company, are filed electronically through the System for Electronic Document Analysis and Retrieval (SEDAR) and are available online at www.sedar.com.

The effective date for this report is April 19, 2018.

Overview of Operations

Renforth Resources Inc. is a Toronto-based gold exploration company with interests in established exploration camps in both Quebec and Ontario. In the Cadillac-Malartic Gold Camp the Company holds the New Alger project, with an inferred resource of 237,000 ounces of gold above a depth of 200 metres contained in 3,505,000 tonnes with a grade of 2.1g/t Au using a cut-off of 0.75 g/t Au (see press release July 17, 2014) as calculated by Brian H. Newton P. Geo and Philip Burt P. Geo, which is located on the Cadillac Break outside of Cadillac, Quebec and an option to purchase 100% of the Parbec Property from Globex Mining Enterprises Inc. (GMX-TSE), where Renforth established a maiden resource of 262,230 t Indicated at a grade of 3.62 g/t Au containing 33,592 ounces and 7,256,872 t Inferred at a grade of 2.01 g/t Au representing 514,108 ounces. Renforth holds the West Malartic Project, contiguous to, and interpreted from geophysics to be the structural extension of, the Canadian Malartic Mine. The West Malartic Project has been optioned to SOQUEM, a subsidiary of Investissement Quebec, whereby SOQUEM can earn a 50% interest by expenditure of \$1.3 million dollar in approved exploration. East of Val d’Or Renforth has assembled the gold-bearing Denain-Pershing Project, covering both the eastern little explored termination of the Cadillac Break in to the Grenville front and a gold bearing banded-iron formation on the property. In Ontario, the Company owns 100% of the Nixon-Bartleman project, located on the Porcupine-Destor fault in the West Timmins Mining area, another historic gold occurrence with a couple of old shallow pits onsite and a history of past drilling which has not yet defined the gold occurrence.

The New Alger and Parbec Gold Projects represent gold resources offering road access exploration and development with deep labour pools and service providers to draw upon for Renforth, and along with the balance of the property portfolio, an opportunity to build shareholder value through basic exploration on prospective ground with historically identified gold occurrences.

Acquisitions and Financing highlights

Renforth entered in to an earn-in and joint ventures agreement for Renforth’s 100% held West Malartic Property (the “Property”) with SOQUEM whereby SOQUEM can earn a 50% interest in the Property with an expenditure of \$1.3 million over 3 years. SOQUEM, a subsidiary of Investissement Québec, is a leading player in mineral exploration in Québec. Its mission is to explore, discover and develop mining properties in Québec. SOQUEM has participated in more than 350 exploration projects and contributed to major discoveries of gold, diamonds, lithium and other minerals.

Renforth acquired the Denain Gold Project. The project is located on the Cadillac Break, approximately 10km east of the former Chimo Mine and comprised of 145 claims over ~7700 Ha, hosts the Americ Au Occurrence and the Matchi-Manitou and Sullivan Cu/Zn Occurrences. The Company also acquired the Pershing block. The gold bearing 2244 Ha Pershing claim block bridges the distance between Renforth’s Denain Property and Monarque’s Croinor deposit, contiguous to both.

During 2017, Renforth completed over \$1.7m in equity financings.

Projects

New Alger Gold Project

On January 28, 2013, Renforth acquired a 100% interest in Cadillac's New Alger Property, located in Cadillac Township, Québec. As at the date of this MD&A, all payments under the agreement have been satisfied.

On February 18, 2014, the Company acquired the option to acquire 191.4 hectares of ground adjoining the western boundary of Renforth's New Alger project. On September 19, 2016, the Company acquired 100% of the Claims Area for total, cumulative, consideration of 450,000 shares of Renforth, \$10,000 in cash payments and the issuance of a 1% NSR, which can be repurchased by Renforth, to the vendor.

In January 2018, 33 whole or fractional claim units were staked and 25 whole or fractional claim units acquired, increasing the size of the southern portion of the New Alger Property.

The New Alger Project is strategically located in the Cadillac Mining Camp which boasts over 45 million ounces of gold (produced, reserves and resources). Renforth is positioned in the heart of this camp, Agnico-Eagle and their deep flagship Laronde Mine is the northern neighbour, the former O'Brien Mine is the eastern neighbour, both are/were mines deeper than the Thompson-Cadillac's historic 340m shaft with current surface mineralization.

2017 work programs

In October, 2017 the Company conducted a stripping program on the Discovery Vein. The completed stripping has revealed several en-echelon quartz veins over the entirety of the 230m stripped and identified has identified an ~565m² bulk sample target area with an average grade of 0.76 g/t Au located in two veins. This target area is located within the stripped 230m of the known ~450m strike of the Discovery Vein Horizon, located ~250m south of the Thompson-Cadillac Mine Area. The stripping is situated in correlation to historic underground workings, for which no production data is available, on the crest of a hill and only 200m south of the #117 - Trans-Canada Highway Northern Route which crosses the property.

A preliminary description of the newly discovered system is that it is comprised of a continuous, strongly dipping vein structure containing a sulfide poor (1-5%), free gold system. The mineralized veins are hosted by a strongly folded sedimentary package at greenschist facies and are controlled by detachment planes along preserved fold hinges.

A high level geological re-interpretation of the Mine Area deposit, the Discovery Vein showing and other known gold mineralization of the property, and any potential relationship between all of these, is currently ongoing.

Breakdown of expenses for the years ended December 31, 2017 and December 31, 2016:

	2017	2016
Management fees	\$ 45,000	\$ 51,000
Field program	143,415	10,115
Data Compilation and Mapping	7,685	-
Tax credit	-	(13,556)
Other	8,760	779
	<u>\$204,860</u>	<u>\$ 48,338</u>

In March 2018, the Company retained Eagle Geophysics of Sorel, Qc to fly a helicopter borne high resolution Quadri-Mag, VLF and AFMAG Survey over the project. As at the date of this report, the data obtained is currently being processed and interpreted.

The Company is planning drill and other exploration programs which are dependent on obtaining additional financing.

Nixon Bartleman Property

On August 4, 2014 Renforth entered into an option agreement to earn a 55% interest in the Nixon-Bartleman Property located in the West Timmins Mining Area, in the western part of the Porcupine Mining Camp. On April 28, 2016, Renforth negotiated a 100% purchase of the Nixon Bartleman property, subject to a pre-existing 2% NSR, for total consideration of 3 million shares of Renforth and the issuance of an additional 0.5% NSR to the vendor. This purchase replaces the prior option held on the property

The property is comprised of 19 claims, four of which are patent claims, with the Porcupine-Destor Fault running across the centre of the property. On the patent claims, there have been 5 gold-bearing quartz veins uncovered by previous operators, along with extensive stripping and channel sampling, a total of 43 holes have been drilled on this property.

There was no work on the property in 2017. Future work is dependent on obtaining additional financing.

Parbec Gold Property

On January 29, 2015, the Company entered into a letter of intent to acquire the Parbec Gold Property (“Parbec”) which straddles the Cadillac Break for a strike length of 1.3 km. and encompasses a historic gold occurrence identified in two zones on the property above a depth of 500 feet, and over a strike length of 2000 feet . In addition, historic drilling demonstrates gold intercepts below 500 feet and demonstrates continuity to the east with additional, on property, mineralized occurrences. Further work is required to define this historic gold occurrence, which is open along strike and at depth and meet current reporting guidelines. Parbec is located west of the Town of Malartic Quebec within the Malartic Mining Camp, contiguous to Parbec is the East Amphi deposit (inferred resource of 1.4Mt grading 1.47 g/t Au) which forms part of the Canadian Malartic Mine Property. East Amphi shares the same lithologies and deformation zone as Parbec . The letter of intent allows Renforth to earn a 100% interest in the property from Globex Mining Enterprises Inc. (“Globex”) under the following terms;

- 1) over 4 years make cash payments totaling \$550,000 (\$25,000 within 6 months of signing (paid), \$50,000 within 12 months (paid), \$25,000 within 18 months (paid), \$125,000 within 24 months (paid), \$125,000 within 36 months, and \$200,000 within 48 months);
- 2) over 4 years incur \$4,000,000 in work costs on the property (\$350,000 in year one¹, \$500,000 by the end of year two¹, \$1,150,000 by the end of year three¹, and \$2,000,000 by the end of year four);
- 3) over 4 years issue a total of 2,000,000 shares to Globex (250,000 on signing (issued), 500,000 before the end of year one (issued), 500,000 before the end of year two (issued), 500,000 before the end of year three, 250,000 before the end of year four.
- 4) Globex retains a gross metal royalty on the property of between 1% and 2% (percentage calculated in relationship to the prevailing price of gold at the time of delivery).

⁽¹⁾ The Company has not met the work requirements to date. The vendor has agreed to extend the work requirements to a future date.

2017 work programs

A backpack drill program was carried out over 4 field days this fall in order to test the usefulness of the backpack drill at Parbec. This program has determined that the drill is useful in obtaining sub-surface vertical samples, providing fresh rock and provides an ability to obtain sub-surface sample material to explore surface observations or where other sampling is not possible. 20 holes were drilled to varying depths, these were successful in revealing and defining 3d mineralization trends and structures, returning assay results consistent with the mineralization drilled, with one notable exception. Sample 1408808 was a 90cm hole drilled in a trench excavated in 2015 and poorly sampled due to water infiltration at the time of trenching. During the backpack program a hole was successfully drilled, obtaining a result of 4.2 g/t over 90cm (vertical), continuing the south porphyry unit to surface. In addition to this the Tuff Horizon, under several metres of clay overburden, was briefly intersected (20cm) and returned gold values, a felsite horizon was also successfully sampled and returned gold values.

In 2017, Renforth completed a field program on the project. A discovery of a new gold mineralization type at Parbec this season was press released on July 12, 2017, this mineralization is outside of the area of the maiden gold resource established by Renforth at Parbec in March 2016. That resource tonnage consists of 262,230 t Indicated at a grade of 3.62 g/t Au containing 33,592 ounces and 7,256,872 t Inferred at a grade of 2.01 g/t Au representing 514,108 ounces (press release Mar 7, 2016).

With the success of the backpack drill and field programs, Renforth commenced a drill program designed to in-fill the resource model and to test the western strike of the Camp Zone mineralization.

The first phase of the drill program was completed finished on Dec 22, 2017 with a total of 1265m drilled to complete 7 of the planned drillholes. The drilling has extended the mineralized resource model horizons at Parbec by 60m on strike to the NW with gold intersected in each of seven holes.

The second phase of the drill program was completed on Dec 22, 2017 with a total of 1619m drilled to complete 7 of drillholes. Each of the 7 holes drilled in January 2018 returned gold values, including the longest two intersections obtained by Renforth to date where PAR-18-73 averaged 1.44 g/t Au over a length of 32.6 metres, and PAR-18-74 which graded 1.23 g/t Au over 33.2 metres.

In April 2018, Renforth commenced the third and final phase of this program.

Breakdown of expenses for the years ended December 31, 2017 and December 31, 2016:

	2017	2016
Management fees	\$ 45,000	\$ 45,000
Analysis	-	1,311
Drill programs	200,172	-
Tax credit	-	(27,030)
Field program and report	93,754	42,200
Data compilation and modelling	9,588	-
Consulting geo fees	5,000	1,100
	\$ 353,514	\$ 62,581

2018 outlook on Parbec

Several areas exist to be targeted in future exploration at Parbec (subject to available financing), as follows;

- 1- Continued drilling from surface within the deposit as modeled, to depth and along strike – the process of detailed modeling that resulted in this initial resource calculation also highlighted “gaps” within the model. These gaps can be targeted with surface drilling and if successful would positively impact the resource. Within the outlined resource there are deeper gold intersections, gaps occur between these and the bulk of the resource (100% of the indicated and approximately 73% of the inferred resource is located within 200m of surface). The vertical gaps are priority drill targets. Lastly, the structure is open along strike and represents a prospective target along its length.
- 2- Dewatering the ramp – the 580 m ramp at Parbec ends at 100 m depth, about 30m south of the Tuff horizon in the Camp Zone which it was targeting. This ramp, once dewatered, would provide access to sample the ramp, including the felsite zone it was collared in and provide underground drilling stations to investigate the main mineralized zones. Additionally, the ramp could be extended along strike to allow additional drilling at depth and along strike as well as access for bulk sampling of the mineralized zones.
- 3- Structural exploration – the resource modeling process has identified several areas of elevated gold values occurring in proximity to fault junctions. Some of the best deeper intersections at Parbec occur in this setting. Drilling above and below those intersections to increase known high-grade areas is planned.

- 4- A large intrusive diorite stock, historically identified and verified in the field by Renforth is located in the SW portion of the property, on the south side of the Break. The marginal areas of this intrusive have been found to host elevated gold values in drill intercepts outside of the area of the current resource. An intrusive can be a heat engine for the emplacement of gold as well as provide a prospective environment for mineralization in the fracturing that occurs along the intrusive's margins.
- 5- Northern exploration targets –additional targets exist to the north of the Cadillac Break.

Denain Gold Project, Val d'Or, Quebec

In March 2017, the Company acquired the Denain Gold Project, located on the Cadillac Break, approximately 10km east of the former Chimo Mine. The Project, comprised of 145 claims over ~7700 Ha, hosts the Americ Au Occurrence and the Matchi-Manitou and Sullivan Cu/Zn Occurrences.

The claims were acquired for 3,750,000 shares of Renforth to be issued from Treasury for a 100% interest in 101 of claims and an 80% interest in 44 of the claims where the arms-length vendor only holds an 80% interest in such claims. The vendor will retain a 2% NSR on the claims, half of which (1% of the 2%) can be purchased by Renforth for \$500,000.

Denain Pershing Project

In July 2017, the Company acquired the gold bearing 2244 Ha Pershing claim block, this block bridges the distance between Renforth's Denain Property and Monarque's Croinor deposit, contiguous to both. Gold mineralization is present in association with a series of iron formation units, shear zones and hydrothermally altered zones. Elevated gold assays are reported in DDH and trenches from exploration programs in the 1980s and 1990s, which targeted the iron formations and shear structures in several locations across the Pershing block. The most recent results are reported in Forest Gate Energy DDH FG11-05: a result of 145 g/t Au in a first screen analysis and 44.6 g/t Au in the second screen analysis of the same sample, taken from 190.35 to 190.65 m. The variability of the results based upon material size passing through a screen is indicative of coarse gold. In hole FG11-04 assay results reported were 18.3 g/t Au over .015m and 10.5 g/t Au over 0.20m. These results were reported by a prior operator, Forest Gate Energy, by press release August 11, 2011. Renforth encourages the reader to reference that press release for details of sampling and quality control undertaken at that time pursuant National Instrument 43-101.

This acquisition brings the Denain Pershing project size to a total of 10001.28 Ha.

Renforth acquired the Pershing block from two vendors, the total consideration paid is \$27,000 cash and the issuance of 1,250,000 shares. The shares issued are restricted for four months from the date of issue. One vendors retains a 2% NSR on 36 of the purchased claims, with Renforth able to buyback half of the NSR (1% NSR) for \$1,000,000 for a period of 10 years. The other vendor retains a 2% GMR on 3 of the claims.

In November 2017, the Company completed an airborne magnetic survey over the Denain property for a total cost of \$228,480 (\$95,200 in cash, \$133,280 in common shares).

The survey concluded that the Cadillac Break continues onto the Denain-Pershing Property for approximately 3 kms after passing through a fault zone "the Larder Lake-Cadillac Fault which enters the western side of the property striking NW-SE and is partially cut-off at the claim boundary. This magnetic iron formation appears to abruptly end but picks up again to the north and continues Eastward for ~3km before tapering away. This offset may be due to a north-south strike-slip fault as illustrated in Figure 20." In addition to this observation the survey identified several other structures in the magnetic data, as well as features visible in the VLF data, which, while not visible in the magnetic data, that correlate to known gold occurrences on the property. The survey results were interpreted by Sean Scrivens P.Geo, President of Geo-Pulse Inc. and included in the report "Technical Survey Report Quadrimag & VLF Geophysical Survey" which will be filed for work assessment.

In addition, Renforth has commenced a detailed geophysical interpretation of the entire DenainPershing Property using the newly acquired Denain data and the available Pershing data. The Denain program was designed and flown to be combined with the Pershing data, resulting in a cohesive data set. This combined survey, along with known drill results

and sample locations and showings, will be evaluated to provide additional new ground follow up targets for Renforth's geologists to explore, likely in summer 2018.

As part of the acquisition decision Renforth's geological consultants have assembled the following summary of the areas of interest on the Denain property, through consultation of the available government mapping and accessible historic work filings. Renforth deems the historic work to be indicative of potential on the property, however, Renforth duly cautions the reader that historical work was carried out prior to 43-101.

1: Americ Au Occurrence

A historic grab sample of 7.89g/t Au, with associated elevated Ag and Cu, was taken from quartz veins in an amphibolized iron formation in close association with porphyry and gabbro sills. Mineralization is present as disseminated pyrite, pyrrhotite, arsenopyrite and chalcopyrite. A "grab sample" is a selective sample and is not indicative of mineralization over the entirety of the property. This occurrence lies on the same magnetic band that is associated with the Nordeau and Chimo deposits. The occurrence has never been trenched or systematically sampled, and surface work has been limited to the existing outcrop.

2: Matchi-Manitou / Sullivan Cu-Zn Occurrences

A series of historic trenches near the shore of the lake exposed polymetallic sulphide mineralization. Most work was undertaken in the 1950s and is poorly documented, but historic assays include a 9% Zn grab sample. A "grab sample" is a selective sample, this is not indicative of mineralization on the entirety of the property. There appear to be at least two groups of trenches, geophysical surveys imply that the host structures strike southwesterly, deeper into the property.

3: Possible Venpar Strike Continuation

The Venpar deposit lies on a second long magnetic trend which joins with the Chimo/Nordeau trend, the Venpar mineralization abruptly stops at the Denain claim boundary, where it is truncated by a fault. The magnetic trend stops abruptly in a similar fashion. A magnetic high starts on the far side of the fault (on the Denain property) and runs eastward for about 3km. This may be an offset extension of the same trend. Eight drillholes were drilled to test this trend in the 1960s and 1980s, finding iron formations but not encountering any gold mineralization above ~0.3g/t Au. However, little or no surface work appears to have taken place here, and a trenching program may be a better basis to explore this area.

4: Possible Venpar Strike Continuation on East Side of Lake

This area has seen almost no exploration, but lies atop the same volcanic/sedimentary package as the Venpar prospect and the Americ occurrence.

5: Bloc Simon Iron Formation Extension

Just beyond the property boundary, quartz veins in an iron formation give several narrow, high grade historic DDH intervals including 29g/t Au over 0.5m (not on the property). None of this work extends onto the Denain property, but there is some potential for similar gold mineralization in the northeast corner of the property based upon interpretation of the available mapping.

6: Mag High in Grenville Gneisses

A linear magnetic high lies in gneisses, derived from mixed sediments and volcanics, in the Grenville province in the eastern part of the property. This anomaly runs into a gap in the regional survey data in the centre-east part of the property. The source of this magnetic anomaly is not known as there has been little to no exploration in this area. It may be of interest as an exploration target.

Malartic West

The Property is contiguous to the operating Canadian Malartic Mine and hosts the western extension of the geological units present at the Canadian Malartic Mine.

In July 2017, the Company entered in to an earn-in and joint ventures agreement (the "Agreement") for Renforth's 100% held West Malartic Property (the "Property") with SOQUEM whereby SOQUEM can earn a 50% interest in the Property with an expenditure of \$1.3 million over 3 years.

Under the terms of the Agreement the program spending shall be divided over 3 years with the first year spending requirement of \$300,000 being a firm commitment. SOQUEM, as operator during the earn-in period, has elected to undertake field prospecting and a detailed IP survey, with Renforth's approval. This work will be done in order to better define the presence of the interpreted porphyry monzonite and tonalite dykes on the property which, on the adjacent Canadian Malartic property, host mineralization.

Upon SOQUEM completing the \$1.3 million expenditure over 3 years, or sooner, and earning the 50% interest a joint-venture will be formed with terms and conditions typical of a joint venture.

2017 work programs

SOQUEM completed an initial exploration program under their earn in requirement. At West Malartic, also tied on to the Canadian Malartic Mine, in this case south of the Cadillac Break, SOQUEM cut a total of 160 km of line, followed by surveying 140 km of ground IP. The data resultant from this survey, along with other property information available, is being incorporated into a comprehensive geo-referenced property dataset by SOQUEM. In addition Renforth is advised that SOQUEM intends to prospect at West Malartic this summer, followed by a drill program. Renforth looks forward to the continuation of this investment in West Malartic by SOQUEM, additional information will be shared with Renforth's shareholders as it is available.

Selected Annual Information

For the years ended	2017	2016	2015
	\$	\$	\$

Results of Operations

	2017	2016
Expenses		
General and corporate	\$ 210,509	\$ 156,477
Share based payments	137,494	110,529
Loss before other items	\$ (348,003)	\$ (267,006)
Other items		
Other income	-	4,000
Gain on settlement of debt	-	5,000
Net loss and comprehensive loss for the year	\$ (348,003)	\$ (258,006)

Revenues

The exploration properties acquired by the Company are still in the early exploration and development stage. Until sufficient work has been completed to confirm the feasibility of any specific interest being placed into production, it is not anticipated that the Corporation will have any material revenue. No revenues have been reported for 2017 and 2016.

Other items

Other income – flow through share premium

During 2016 and 2017 the Company issued flow through shares. For accounting purposes, the proceeds from issuance of these shares are allocated between the offering of shares and the sale of tax benefits. The allocation was made based on the difference between the price of a non-flow through share and the amount the investor paid for the flow-through share. A liability was recognized for this difference. The liability was reduced and the reduction of premium liability was recorded in other income on the date when the Company filed the appropriate renunciation forms with the Canadian taxation authorities.

Gain on settlement of debt – In 2016, total debt of \$85,000, was settled by the issuance of 2,000,000 common shares with a market value of \$80,000.

General and Corporate - breakdown for the years ended December 31, 2017 and December 31, 2016.

For the years ended December 31,	% of 2017		2016	% Change
	2017	Total		
General and corporate				
Management compensation	\$ 90,000	25.86%	\$ 90,000	-%
Legal and audit	20,682	5.94%	22,400	-7%
Consulting services	47,644	13.69%	2,000	2282%
Rent	-	-	6,375	-%
Insurance	9,100	2.61%	9,129	-%
Transfer agent and shareholder communication	9,088	2.61%	6,211	46%
Administrative and general	27,370	7.87%	14,334	91%
Stock exchange fees	6,625	1.90%	6,028	9%
Share based payments	137,494	39.51%	110,529	24%
	\$ 348,003	100.00%	\$ 267,006	30%

Management compensation for 2017 comprised of CEO fees of \$30,000 (2016 - \$30,000) and CFO management fees of \$60,000 (2016 - \$60,000). \$90,000 (2016 - \$90,000) of fees relating to the CEO was capitalized to the exploration and evaluation assets as they directly related to managing the Company's properties and exploration programs.

Consulting fees increased compared to 2016 as, in 2017, the Company engaged a financial communications companies to provide public and investor relations services.

Legal and audit include corporate legal fees and annual audit fees.

Share based payments - During 2017, a total of \$137,494 (2016 - \$110,529) was expensed with respect to that portion of the options vesting during the period. The stock option expense does not affect the cash resources of the Company. The timing of this expense is subject to the date of issue and vesting terms of the options. The values of the options are derived using the Black Scholes option pricing model in which subjective assumptions are used.

Summary of Quarterly Results

The Company's level of activity and expenditures during a specific quarter are influenced by the availability of working capital, the availability of additional external financing, the time required to gather, analyze and report on geological data related to mineral properties, the results of the Company's prior exploration activities on its properties and the amount of expenditure required to advance its projects.

Liquidity and Capital Resources

The Company's cash increased to \$1,026,984 at December 31, 2017 from \$16,906 at December 31, 2016. The Company's working capital was \$387,541 compared to a deficiency of \$256,520 at December 31, 2016. The increase in cash was attributed to \$1,673,530 of net proceeds from the issuance of common shares and warrants, and \$163,693 in cashflow from operations. These were offset by \$827,145 spent on exploration and evaluation assets (both acquisition costs and exploration).

During 2017, the Company settled debt to related parties in the amount of \$389,850 with the issuance of 7,215,857 common shares.

During 2017, the Company has raised gross proceeds of \$1,747,980 through the issuance of common shares and warrants.

The Company is in discussions with a number of parties regarding providing additional financings for the Company.

At this time, the Company is not anticipating an ongoing profit from operations, therefore it will rely on its ability to obtain equity financing for growth. The ability of the Company to continue operations and carry out further desired exploration activities over the course of the next 12 months is dependent upon obtaining additional financing. The Company will seek to raise additional funding to finance future exploration programs. The timing and ability to do so will depend on the liquidity of the financial markets as well as the acceptance of investors to finance resource based junior companies, in addition to the results of the Company's exploration programs and the acquisition of additional projects. There can be no guarantee that the Company will be able to secure any required financing.

Off-Balance Sheet arrangements

There are no off-balance sheet arrangements as at the date of this MD&A.

Related Party Transactions

Key management includes members of the board of directors, the President and Chief Executive Officer and the Chief Financial Officer. The aggregate value of transactions relating to key management personnel and entities over which they have control or significant influence were as follows for the years ended December 31, 2017 and December 31, 2016:

	2017	2016
Salary or other short-term benefits	\$ 180,000	\$ 180,000
Share based payments issued	83,850	80,100
	\$ 263,850	\$ 260,100

(a) Other related party balances and transactions

The Company engages Billiken Management Services Inc. and Minroc Management Limited (“Billiken”), geological consulting companies, to manage the Company’s exploration programs. The Company’s CEO, Nicole Brewster, is a shareholder of Billiken. For the year ended December 31, 2017, the Company was charged \$437,342 (2016 - \$52,315) in exploration related expenditures, and \$120,000 (2016 - \$120,000) in management fees for the CEO, of which \$90,000 (2016 - \$90,000) was capitalized and recorded in exploration and evaluation assets and \$30,000 (2016 - \$30,000) was charged to general and corporate expense on the statement of loss. The Company also rents office space from Billiken. During the year ended December 31, 2017, the Company was charged \$nil (2016 - \$6,375) for office rent. On January 11, 2017, the Company settled debt with Billiken in the amount of \$192,100 by the issuance of 3,842,000 common shares. The shares had a market value of \$192,100. On July 7, 2017, the Company settled debt with Billiken in the amount of \$67,800 by the issuance of 968,571 common shares. The shares had a market value of \$67,800. As at December 31, 2017, \$246,280 (2016 - \$187,470) was owed to Billiken. This amount is unsecured, non-interest bearing with no fixed terms of repayment.

During the year ended December 31, 2017, the Company was charged \$60,000 (2016 - \$60,000) in management fees by a company owned by the Chief Financial Officer of the Company, for CFO services. As at December 31, 2017, \$33,900 (2016 - \$96,050) is owing to this officer and included in accounts payable. This amount is unsecured, non-interest bearing with no fixed terms of repayment. On January 11, 2017, the Company settled debt with the CFO in the amount of \$96,050 by the issuance of 1,921,000 common shares. The shares had a market value of \$96,050. On July 7, 2017, the Company settled debt with the CFO in the amount of \$33,900 by the issuance of 484,286 common shares. The shares had a market value of \$33,900.

Proposed Transactions

There is no imminent decision by the Board of Directors of the Company with respect to any transaction.

Critical Accounting Estimates

The preparation of these financial statements requires management to make judgments and estimates that affect the reported amounts of assets and liabilities at the date of the financial statements and reported amounts of expenses during the reporting period. Actual outcomes could differ from these judgments and estimates. The financial statements include judgments and estimates which, by their nature, are uncertain. The impacts of such judgments and estimates are pervasive throughout the financial statements and may require accounting adjustments based on future occurrences. Revisions to accounting estimates are recognized in the period in which the estimate is revised and the revision affects both current and future periods.

Significant assumptions about the future and other sources of judgments and estimates that management has made at the statement of financial position date that could result in a material adjustment to the carrying amounts of assets and liabilities, in the event that actual results differ from assumptions made, relate to, but are not limited to, the following:

Significant accounting judgments

- In concluding that the Canadian dollar is the functional currency, management considered the currency that mainly influences the sales prices, and cost of providing goods and services in each jurisdiction in which the Company operates. The Company also considered secondary indicators including the currency in which funds from financing activities are denominated and the currency in which funds are retained;
- How financial assets and liabilities are categorized is an accounting policy that requires management to make judgments or assessments.

Estimates and assumptions

- the recoverability of amounts receivable and prepayments which are included in the statement of financial position;
- the estimated useful lives of equipment which are included in the statement of financial position and the related depreciation included in the statement of loss and comprehensive loss;
- the estimated value of the exploration and development costs which is recorded in the statement of financial position;
- the inputs used in accounting for share based payment expense in the statement of comprehensive loss;
- management's position that there is no income tax considerations required within these financial statements;
- the assessment of indications of impairment of each mineral property and related determination of the net realizable value and write-down of those properties where applicable.

Recent accounting pronouncements

The accounting policies applied in the preparation of the interim consolidated financial statements are consistent with those followed in the preparation of the Company's December 31, 2016 annual financial statements, except for the adoption of new standards and interpretations as of January 1, 2017.

Recently-Adopted Accounting Pronouncements and Recent accounting pronouncements

Certain pronouncements were issued by the IASB or the IFRIC that are mandatory for accounting periods on or after January 1, 2018 or later periods. Many are not applicable or do not have a significant impact to the Company and have been excluded. The following have not yet been adopted and are being evaluated to determine their impact on the Company.

IFRS 9, Financial Instruments ("IFRS 9") was updated and re-issued by the IASB on July 24, 2014 and will replace IAS 39, "Financial Instruments: Recognition and Measurement" ("IAS 39"). IFRS 9 replaces the multiple rules in IAS 39 with a single approach to determine whether a financial asset is measured at amortized cost or fair value and a new mixed measurement model for debt instruments having only two categories: amortized cost and fair value. The approach in IFRS 9 is based on how an entity manages its financial instruments in the context of its business model and the contractual cash flow characteristics of the financial assets. The new standard also requires a single impairment method to be used, replacing the multiple impairment methods in IAS 39. IFRS 9 is effective for annual periods beginning on or after January 1, 2018.

IFRS 2 Share based payments, the amendments, which were developed through the IFRS Interpretations Committee, provide requirements on the accounting for the effects of vesting and non-vesting conditions on the measurement of cash-settled share-based payments; share-based payment transactions with a net settlement feature for withholding tax obligations; and a modification to the terms and conditions of a share-based payment that changes the classification of the transaction from cash-settled to equity-settled. The effective date is for annual periods beginning on or after January 1, 2018.

IFRS 15 Revenue from Contracts with Customers specifies how and when an IFRS reporter will recognize revenue as well as requiring such entities to provide users of consolidated financial statements with more informative, relevant disclosures. The standard provides a single, principles based five-step model to be applied to all contracts with customers. The standard is effective for periods beginning on or after January 1, 2018.

IFRS 16 – Leases (“IFRS 16”) was issued in January 2016 and replaces IAS 17 – Leases as well as some lease related interpretations. With certain exceptions for leases under twelve months in length or for assets of low value, IFRS 16 states that upon lease commencement a lessee recognises a right-of-use asset and a lease liability. The right-of-use asset is initially measured at the amount of the liability plus any initial direct costs. After lease commencement, the lessee shall measure the right-of-use asset at cost less accumulated depreciation and accumulated impairment. A lessee shall either apply IFRS 16 with full retrospective effect or alternatively not restate comparative information but recognise the cumulative effect of initially applying IFRS 16 as an adjustment to opening equity at the date of initial application. IFRS 16 requires that lessors classify each lease as an operating lease or a finance lease. A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to ownership of an underlying asset. Otherwise it is an operating lease. IFRS 16 is effective for annual periods beginning on or after January 1, 2019. Earlier adoption is permitted if IFRS 15 has also been applied.

IFRIC 22 – Foreign Currency Transactions and Advance Consideration (“IFRIC 22”) was issued in December 2016 and addresses foreign currency transactions or parts of transactions where there is consideration that is denominated in a foreign currency; a prepaid asset or deferred income liability is recognised in respect of that consideration, in advance of the recognition of the related asset, expense or income; and the prepaid asset or deferred income liability is non-monetary. The interpretation committee concluded that the date of the transaction, for purposes of determining the exchange rate, is the date of initial recognition of the non-monetary prepaid asset or deferred income liability. IFRIC 22 is effective for annual periods beginning on or after January 1, 2018.

IFRIC 23 – Uncertainty Over Income Tax Treatments (“IFRIC 23”) was issued in June 2017 and clarifies the accounting for uncertainties in income taxes. The interpretation committee concluded that an entity shall consider whether it is probable that a taxation authority will accept an uncertain tax treatment. If an entity concludes it is probable that the taxation authority will accept an uncertain tax treatment, then the entity shall determine taxable profit (tax loss), tax bases, unused tax losses and credits or tax rates consistently with the tax treatment used or planned to be used in its income tax filings. If an entity concludes it is not probable that the taxation authority will accept an uncertain tax treatment, the entity shall reflect the effect of uncertainty in determining the related taxable profit (tax loss), tax bases, unused tax losses and credits or tax rates. IFRIC 23 is effective for annual periods beginning on or after January 1, 2019. Earlier adoption is permitted.

Commitments and Contingencies

The Company’s mining and exploration activities are subject to various laws and regulations governing the protection of the environment. These laws and regulations are continually changing and generally becoming more restrictive. The Company conducts its operations so as to protect public health and the environment and believes its operations are materially in compliance with all applicable laws and regulations. The Company has made, and expects to make in the future, expenditures to comply with such laws and regulations.

- (a) See note 6 and 15 (in the 2017 audited financial statements) for additional commitments and contingencies on evaluation and exploration assets.
- (b) The Company renounced \$1,322,860 of qualifying exploration expenditures to the shareholders effective December 31, 2017. Under the “look back” provision governing flow-through shares, \$780,092 of amount was unspent by the end of 2017 and has to be spent by December 31, 2018. The Company spent the amount required.
- (c) The Company renounced \$15,000 of qualifying exploration expenditures to the shareholders effective December 31, 2016. Under the “look back” provisions governing flow-through shares, \$10,000 of this amount was unspent by the end of 2016 and had to be spent by December 31, 2017. The Company spent the amount required.
- (d) The Company’s mining and exploration activities are subject to various laws and regulations governing the protection of the environment. These laws and regulations are continually changing and generally becoming more restrictive. The Company conducts its operations so as to protect public health and the environment and believes its operations are materially in compliance with all applicable laws and regulations. The Company has made, and expects to make in the future, expenditures to comply with such laws and regulations.

The Company’s mining and exploration activities are subject to various laws and regulations governing the protection of the environment. These laws and regulations are continually changing and generally becoming more restrictive. The Company conducts its operations so as to protect public health and the environment and

Risk Factors

Credit risk

The Company's credit risk is primarily attributable to cash and cash equivalents. The Company has no significant concentration of credit risk arising from operations. Cash is held with reputable financial institutions, from which management believes the risk of loss to be remote. Management believes that the credit risk concentration with respect to these items is remote.

Liquidity risk

The Company's approach to managing liquidity risk is to ensure that it will have sufficient liquidity to meet liabilities when due. As at December 31, 2017, the Company had a cash and cash equivalent balance of \$1,026,984 (2016 – \$16,906) to settle current liabilities of \$796,380 (2016 - \$335,957).

Market risk

(a) Interest rate risk

The Company has cash balances and no long-term debt. The Company's current policy is to invest excess cash in investment-grade short-term deposit certificates issued by its banking institutions. The Company periodically monitors the investments it makes and is satisfied with the credit ratings of its banks.

(b) Foreign exchange risk

The Company's functional currency is the Canadian dollar and all major purchases are transacted in Canadian dollars. Management believes the foreign exchange risk is negligible and therefore does not hedge its foreign exchange risk.

The Company does not hold balances in foreign currencies to give rise to exposure to foreign exchange risk.

(c) Price risk

The Company is exposed to price risk with respect to commodity prices. The Company closely monitors commodity prices to determine the appropriate course of action to be taken by the Company. Price risk is remote since the Company is not a producing entity.

Fair value of financial assets and liabilities

The Company has designated its cash and cash equivalents as loans and receivables, which are measured at amortized cost. Accounts payable and accrued liabilities, classified as other financial liabilities, are measured at amortized cost.

As at December 31, 2017 and December 31, 2016, the fair values of Company's financial instruments approximate their carrying values, given their short-term nature.

Disclosure of Outstanding Share Data

The following is for disclosure of information relating to the outstanding securities of the Company:

As at the date of this MD&A the Company had 132,177,162 common shares issued and outstanding.

As at the date of this MD&A the Company had 24,635,767 warrants outstanding.

As at the date of this MD&A the Company had 9,375,000 stock options outstanding.

Other Disclosure

Risks

The Corporation's business is subject to a variety of risks and uncertainties. The exploration and development of mineral properties entails significant financial risk. Significant expenditures are required to assess a property and its mineralization.

Price Volatility

Any future earnings will be directly related to the price of precious and base metals. Such prices have fluctuated over time and are affected by numerous factors beyond the control of the Corporation.

Mining Risk

Renforth's mining exploration operations are subject to conditions beyond its control, which can affect the cost of the work for varying lengths of time.

Mineral exploration is highly speculative in nature, involves many risks and frequently is non-productive. There is no assurance that exploration efforts will be successful. Success in establishing reserves is a result of a number of factors, including the quality of management, the Corporation's level of geological and technical expertise, the quality of land available for exploration and other factors. Once mineralization is discovered, it may take several years in the initial phases of drilling until production is possible, during which time the economic feasibility of production may change. Substantial expenditures are required to establish mineral reserves through drilling, to determine the optimal metallurgical process to extract the metals from the ore and, in the case of new properties, to construct mining and processing facilities. Because of these uncertainties no assurance can be given that exploration programs will result in the establishment or expansion of resources or reserves.

Environment

Operations, development and exploration projects could potentially be affected by environmental laws and regulations of the country in which the activities are undertaken. The environmental standards continue to change and the global trend is to a longer, more complex process. Although the Corporation continuously reviews environmental matters and undertakes to comply with changes as expeditiously as possible, there is no assurance that existing or future environmental regulation will not materially adversely affect the Corporation's financial condition, liquidity and results of operation.

Certain environmental issues, such as storm events, tailings storage seepage, dust and noise emissions, while having been assessed and strategies based on best practices have been adopted, there can be no assurance an unforeseen event will not occur which could have a material adverse effect on the viability of the Corporation's business and affairs.

Government Regulation

The Corporation's operations are subject to significant regulation and laws which control not only the exploration and mining of mineral properties but also the possible effects of such activities upon the environment. Changes in current legislation or future legislation could result in additional expenses, restrictions and delays.

Key Personnel

The Corporation's future success is dependent in large part upon the continued services of certain key personnel. Failure to retain such personnel or failure to attract qualified management in the future, could adversely affect the Corporation's ability to manage its operations.

Financing

Renforth is dependent upon raising financing from third parties in order to continue its operations. There is no guarantee that such financing will be available on commercially suitable terms or at all. Failure to obtain additional financing will materially adversely affect the operations and business of the Corporation.

Forward-Looking Statements

This Management's Discussion and Analysis of Financial Conditions and Results of Operations contains certain forward-looking statements. All statements other than statements of historical fact that address activities, events or developments that the Corporation believes, expects or anticipates will or may occur in the future are forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "contemplate", "target", "believe", "plan", "estimate", "expect" and "intend" and statements that an event or result "may", "will", "can", "should", "could" or "might" occur or be achieved and other similar expressions. These statements are based upon certain assumptions and analyses made by management in light of its experience and perception of historical trends, current conditions and expected future developments, as well as other factors management believes are appropriate in the circumstances. However, whether actual results and developments will conform with management's expectations is subject to a number of risks and uncertainties, including the considerations discussed herein and in other documents filed from time to time by the Corporation with Canadian security regulatory authorities, general economic, market or business conditions, the opportunities (or lack thereof) that may be presented to and pursued by management, competitive actions by other companies, changes in laws or regulations and other factors, many of which are beyond the Corporation's control. These factors may cause the actual results of the Corporation to differ materially from those discussed in the forward-looking statements and there can

be no assurance that the actual results or developments anticipated by management will be realized or, even if substantially realized, that they will have the expected results on Renforth Resources Inc. All of the forward-looking statements made herein are qualified by the foregoing cautionary statements.
