**ONE WORLD LITHIUM ANNOUNCES AQUIFERS CONTAINING BRINES,
ADDITIONAL CLAIMS STAKED AND SUMMARY DRILLING REPORT IN JULY 2019**

VANCOUVER, BC - June 18, 2019 - One World Lithium Inc. (OTCQB -OWRDF) (CSE-OWLI) (the “Company”) (“OWL”) reports it has found multiple aquifers containing brines over a wide area as well as completing its current drilling program at its Salar del Diablo Property (the “Salar”) located in the State of Baja California Norte, Mexico.

Drilling Progress Report

The Company drilled holes 1,3,6,9, & 11 of which four of the drill holes intersected aquifers that contain brine. A fifth hole intersected an aquifer that likely contains brine as the pH test was 8.6 which can be a good indicator of brines.

The presence of multiple aquifers containing brine indicate a potentially prospective area of over 20,000 hectares or 77 square miles on the northern third of the Salar del Diablo Property.

As previously reported on June 05, 2019, there is a dark mudstone layer near the surface that is watertight and forms a cap, which has trapped one or more significant aquifers to depth.

Claim Staking

The Company is also pleased to announce that it has recently staked an additional 28,030 hectares adjoining the existing northern claim block bringing the Company’s total claim block to 103,430 hectares or 399 square miles.

Timing

The sediment and water samples have now been submitted to ALS Global labs in Hermosillo, Mexico and as previously reported on June 13, 2019, the sediment samples will be assayed for 41 elements including lithium, potassium, boron, and magnesium. The water samples will be analyzed for 35 elements including lithium.

The report on drilling results to date should be completed mid to late July 2019, dependent on laboratory turnaround time and compilation of results.

The monsoon season is expected soon. Temperatures at the Salar del Diablo are now reaching 49C (or 120 F) and humidity is increasing daily. The current drilling program has been suspended until the receipt of further drilling permits and related documentation that may not be received until October 2019. The new drilling permits will allow for an increased drilling program.

ONE WORLD
LITHIUM

Doug Fulcher, President and CEO, notes “despite a short drilling program of 19 days, the drilling results have been very successful and have helped to define additional prospective areas for further exploration and drilling this fall. In addition, several changes to the drilling process should improve the drilling efficiencies this fall. As well, the Company expects to achieve increased drill hole depths. To that end, given the Salar del Diablo has never been drilled before, the Operator and Layne Drilling have now learned how to drill substantially different geological conditions found in the valley.”

About One World Lithium

One World Lithium Inc is an exploration company focused on lithium in brine projects. It currently has earned a 60% property interest with an option to acquire a further 30% property interest for a total of a 90% property interest in the 103,430 hectares (399 square mile) Salar del Diablo lithium brine project located in the State of California Baja Norte, Mexico.

John E. Hiner, SME Registered member and a qualified person as defined by the Canadian National Instrument 43-101 has reviewed and approved the scientific and technical disclosure contained in this news release.

On behalf of the Board of Directors of One World Lithium Inc.,

“Douglas Fulcher”

President and Chief Executive Officer

Forward-Looking Information: This press release may include forward looking information within the meaning of Canadian securities legislation. Forward looking information in this press release includes statements based on certain key expectations and assumptions made by the management of the OWL, including the intention of OWL to proceed with the advancement of the Property. Although OWL believes that the expectations and assumptions on which such forward looking information is based are reasonable, undue reliance should not be placed on the forward-looking information because OWL can give no assurance that they will prove to be correct. Forward looking statements contained in this press release are made as of the date of this press release. OWL disclaims any intent or obligation to update publicly any forward-looking information, whether as a result of new information, future events or results or otherwise, other than as required by applicable securities laws. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from the those anticipated in such statements, important factors that could cause actual results to differ materially from the company's expectations include: (I) inability of OWL to execute its business plan and raise the required financing (II) accuracy of mineral or resource exploration activity (III) continued access to mineral property and (IV) risks and market fluctuations common to the mining industry and lithium sector in particular. The reader is cautioned that assumptions used in the preparation of any forward-looking information may prove to be incorrect. Events or circumstances may cause actual results to differ materially from those predicted, as a result of numerous known and unknown risks, uncertainties, and other factors, some of which are beyond the control of the OWL. The reader is cautioned not to place undue reliance on any forward-looking information contained in this press release.
